Before I Knew Him Sep 07 2021 Bright, sociable, and on the verge of moving in with his beautiful girlfriend, Kathryn, Leo Fisch has a brilliant future ahead of him; outwardly at least, he seems happy. That is, until a sinister discovery is made in a forest near Leo's home town, and a figure from childhood re-enters his life. David Caldwell is tough and aggressive; the very opposite of the company Leo now keeps. Unlikely friends, they are bound by a shared summer - and a shared secret - they had promised to forget. As past and present begin to close in, the comfortable life Leo has created for himself starts to unravel. Their terrible truth begins to emerge and Leo must confront not only the awkward, fragile boy he once was, but the events of that summer which threaten to destroy them both... Praise for *The Floating Island*: 'Moving, astute and arrestingly readable. I couldn't put it down.' Miranda Seymour 'Compassionate and beautifully written' Guardian 'Sensuous and evocative ... Anna Ralph has real poise' Helen Dunmore

Wings of Mayhem Feb 18 2020 A Silence of the Lambs-style yarn that takes us into not one, but two criminal minds: a twisted psychopathic killer and a cat-burglar who stumbles upon and steals his fetishized "precious." There is hell to pay for them both as a result.

Mechanical Engineering and Control Systems Oct 20 2022 This book consists of 113

selected papers presented at the 2015 International Conference on Mechanical Engineering and Control Systems (MECS2015), which was held in Wuhan, China during January 23–25, 2015. All accepted papers have been subjected to strict peer review by two to four expert referees, and selected based on originality, ability to test ideas and contribution to knowledge. MECS2015 focuses on eight main areas, namely, Mechanical Engineering, Automation, Computer Networks, Signal Processing, Pattern Recognition and Artificial Intelligence, Electrical Engineering, Material Engineering, and System Design. The conference provided an opportunity for researchers to exchange ideas and application experiences, and to establish business or research relations, finding global partners for future collaborations. The conference program was extremely rich, profound and featured high-impact presentations of selected papers and additional late-breaking contributions. Contents: Mechanical Engineering and Manufacturing Technologies Automation and Control Engineering Communication Networking and Computing Technologies Signal Processing and Image Processing Pattern Recognition and Artificial Intelligence Micro Electromechanical Systems Technology and Application Material Science and Material Engineering System Design and Simulation Sustainable City and Sustainable Development Readership: Researchers and graduate students interested in mechanical engineering and control systems. Key Features: It is one of the leading international conferences for presenting novel and fundamental advances in the fields of Mechanical Engineering and Control Systems The proceedings put together the most up-to-date, comprehensive and worldwide state-of-the-art knowledge in Mechanical Engineering and Control Systems Many of the articles are the output of research funded by Chinese research agencies, representing the state-of-the-art technologies in Chinese engineering R&D Keywords: Mechanical Engineering; Automation; Computer Networks; Signal Processing; Pattern Recognition and Artificial Intelligence; Electrical Engineering; Material Engineering; System Design

The Cost of Corrosion in China Jul 05 2021 This book comprehensively covers corrosion and corrosion protection in China in the areas including infrastructure, transportation, energy, water environment, as well as manufacturing and public utilities. Furthermore, it presents a major consulting project of Chinese Academy of Engineering, which was the largest corrosion investigation project in Chinese history, including the corresponding methods, processes and corrosion protection strategies, and provides valuable information for numerous industries. Sharing essential insights into corrosion prediction and decision-making, this book will help to decrease costs and extend the service life of equipment and facilities; accordingly, it will benefit scientists and engineers working on corrosion research and protection, as well as economists and government employees.

Mr. Moonlight of the South Seas Dec 30 2020 Mr. Moonlight of the South Seas examines the life of American author Robert Dean Frisbie who, at the age of twenty-four, left the United States for the unknown adventurous ports of the Pacific Islands in the early 1920's. He first landed in Papeete, Tahiti, which at the time was a bustling town and the start-off point for many visitors to the region. He would stay a few years learning the Tahitian language, culture, and way of life. He enjoyed sharing his experiences in numerous articles for U.S. publications such as the Atlantic Monthly. Frisbie was fascinated with the number of characters that lived or frequently visited the island. These included Tahitians, sea captains, beachcombers and writers. He would often refer to these characters in his stories. His most notable friend was James Norman Hall, who would eventually co-author the Bounty Trilogy. For the remainder of his life, Hall remained one of the few people in whom Frisbie would confide his inner-most thoughts. On their first meeting in Papeete, Frisbie was mesmerized by the setting and the different boats in port. He told Hall, "All these ships.... I suppose you can go almost anywhere from here?" After four years on Tahiti, Frisbie began to take his writing career more seriously and craved finding an isolated island where he could dedicate most of his time to writing his great novel, which he called his "Moby Dick." He settled on the lonely atoll known as Pukapuka in the Cook Islands. He got to know the islanders and their language, customs, and lifestyles. He eventually immortalized the island and some of the characters he knew in many sketches, articles and essays. Several of the pieces were collected and made into his most famous book titled The Book of Puka-Puka. Although writing occupied much of his time, Frisbie lived the life of an islander without, however, becoming what he termed, "native." He believed it was very important to respect the culture of the islanders around him by continuing to acknowledge his separate upbringing. That said, he did enjoy participating in island activities such as fishing, canoeing, and house building. Eventually, Frisbie would marry a Pukapukan girl named Ngatokorua, and together the couple would have five children. His family changed his life and created additional challenges and adventures. The years of living on this lonely atoll would take its toll on Frisbie's health and mind. He could easily go months without talking to another European man, and sometimes a year would pass between ships visiting the island. Frisbie was forced to sail away from Pukapuka due to family tragedies, poor health and a yearning to see other islands. He took his family to Tahiti, Fiji, Samoa, and Rarotonga. During his South Seas travels, he and his children barely survived a monster cyclone on the island of Suvarrow. Despite his wandering, Frisbie returned to Pukapuka on several occasions in hope of reviving some stability with his family. Frisbie was also constantly trying to justify his choice of lifestyle - simple, yet unpredictable, at a time when not many people had the courage to do so. He never lost faith in writing his "Moby Dick"; and he continued to write articles for American magazines. Before his death, Frisbie would publish six very fascinating books that memorialized the people and cultures of this very unique part of the world.

Last of the Fun Bunch Aug 26 2020 This story is about one group of National Park Service seasonal workers, the wildland firefighters. The North Rim of Grand Canyon had for the longest time an elite and historic fire crew known as the "Longshots," made

famous in Stephen Pyne's book, "Fire On the Rim". This takes that story and continues on with the emerging national fire policy during the '80's. Many stories have been written by rangers and firefighters in the past. Many of those are good to excellent retellings of the job and what it entails. This is not that type of story. This includes those types of happenings and people, but exposes a vulnerability in the young, grab life by the balls person that portrays a certain niche of individual, best exhibited by this quote, "Whoso would be a man, must be a nonconformist." (Emerson). The Longshots were a trusted and relied upon crew in the paramilitary organization of wildland fire. Their reputation preceded them and they willingly lived up to the billing. To be a Longshot was an honor and a highly sought after position. Leadership, self-sufficiency, intelligence, as well as hard, sustaining teamwork was expected of each member. They worked hard and they played hard. It comes with laying your life on the line and bonding with your brethren. The other park and concession employees had much respect and admiration for the Longshots and loved them when in station. During the '80's, they received the unofficial title as the, "Fun Bunch," due to their highly positive outlook, their friendliness to all, elite status yet curbed egos and passion for life. They knew how to have a good time and enjoyed themselves wherever they were: on a fire, running a chainsaw, or in the saloon. Part of this story is of that circle around the sun known as nineteen eighty-six, the last season of the fabled "Longshots." Although this story is somewhat about fire management back in its infancy, it is also about a community of people fashioning friendships and forming lives in the isolated land known as the North Rim of Grand Canyon National Park.

New Directions in the Anthropology of Dreaming Aug 18 2022 This book presents new directions in contemporary anthropological dream research, surveying recent theorizations of dreaming that are developing both in and outside of anthropology. It incorporates new findings in neuroscience and philosophy of mind while demonstrating that dreams emerge from and comment on sociohistorical and cultural contexts. The chapters are written by prominent anthropologists working at the intersection of culture and consciousness who conduct ethnographic research in a variety of settings around the world, and reflect how dreaming is investigated by a range of informants in ever more diverse sites. As well as theorizing the dream in light of current anthropological and psychological research, the volume accounts for local dream theories and how they are situated within distinct cultural ontologies. It considers dreams as a resource for investigating and understanding cultural change; dreaming as a mode of thinking through, contesting, altering, consolidating, or escaping from identity; and the nature of dream mentation. In proposing new theoretical approaches to dreaming, the editors situate the topic within the recent call for an "anthropology of the night" and illustrate how dreams offer insight into current debates within anthropology's mainstream. This up-to-date book defines a twenty-first century approach to culture and the dream that will be relevant to scholars from anthropology as well as other disciplines such as religious studies, the neurosciences, and psychology.

Construction Equipment Management May 23 2020 This revised and updated edition of Construction Equipment Management fills a gap on this subject by integrating both conceptual and hands-on quantitative knowledge on construction equipment into a

process that facilitates student learning. The first six chapters summarize interdisciplinary concepts that are necessary to ground students' learning on construction equipment management, including both engineering and economics. Each of the next 16 chapters covers a different type of construction equipment and associated methods of use. The final chapter introduces the more advanced concept of operation analysis. This allows the book to be used on numerous courses at different levels to prepare graduates to apply skills on construction equipment when planning for a new project, estimating its costs, and monitoring field operations. Organized around the major categories of construction equipment, including both commercial and heavy civil examples, case studies, and exercises, this textbook will help students develop independence in applying concepts to hands-on scenarios. A companion website provides an instructor manual, solutions, additional examples, lecture slides, figures, and diagrams.

Cellular Learning Automata: Theory and Applications Mar 21 2020 This book highlights both theoretical and applied advances in cellular learning automata (CLA), a type of hybrid computational model that has been successfully employed in various areas to solve complex problems and to model, learn, or simulate complicated patterns of behavior. Owing to CLA's parallel and learning abilities, it has proven to be quite effective in uncertain, time-varying, decentralized, and distributed environments. The book begins with a brief introduction to various CLA models, before focusing on recently developed CLA variants. In turn, the research areas related to CLA are addressed as bibliometric network analysis perspectives. The next part of the book presents CLA-based solutions to several computer science problems in e.g. static optimization, dynamic optimization, wireless networks, mesh networks, and cloud computing. Given its scope, the book is well suited for all researchers in the fields of artificial intelligence and reinforcement learning.

Moody's Industrial Manual Jan 11 2022 Covering New York, American & regional stock exchanges & international companies.

Know Your Diggers Oct 08 2021 This selection is designed to satisfy the curiosity of people interested in the plant and machinery they commonly see as they travel around the UK. Paul Argent's selection includes diggers, excavators, backhoes, rollers, cranes, demolition machines, loaders, dumpers and a road planer. The author shows products from most of the major manufacturers such as JCB, Caterpillar, Volvo, Case, Komatsu, Hitachi, Kubota and Liebherr. Each of the examples is seen at work in a full-page photograph. Paul's accompanying text gives details of the class of machine represented, the work for which it is suitable and some technical specifications. The range of machinery is wide, offering novice enthusiasts a chance to get to grips with many different types, a springboard to a deepening interest in the plant and machinery at work every day in Britain.

Bouddi National Park Nov 09 2021

Diesel Particulate Filter Technology May 15 2022 Until recently, the complexity of the Diesel Particulate Filter (DPF) system has hindered its commercial success. Stringent regulations of diesel emissions has led to advancements in this technology, therefore mainstreaming the use of DPFs in light- and heavy-duty diesel filtration applications. This book covers the latest and most important research in DPF systems, focusing mainly

on the advancements of the years 2002-2006. Editor Timothy V. Johnson selected the top 29 SAE papers covering the most significant research in this technology.

How Cool Are Penguins Mar 01 2021 *How Cool Are Penguins* is a book that will introduce young children to the world of penguins. It is written and illustrated in a fun and informative way that will entertain both the young and the young at heart.

Advances in Natural Computation, Fuzzy Systems and Knowledge Discovery Feb 24 2023

This book consists of papers on the recent progresses in the state of the art in natural computation, fuzzy systems, and knowledge discovery. The book is useful for researchers, including professors, graduate students, as well as R & D staff in the industry, with a general interest in natural computation, fuzzy systems, and knowledge discovery. The work printed in this book was presented at the 2022 18th International Conference on Natural Computation, Fuzzy Systems, and Knowledge Discovery (ICNC-FSKD 2022), held from 30 July to 1 August 2022, in Fuzhou, China. All papers were rigorously peer-reviewed by experts in the areas.

The Hydraulic Handbook May 03 2021 Hardbound. The first point of reference for design engineers, hydraulic technicians, chief engineers, plant engineers, and anyone concerned with the selection, installation, operation or maintenance of hydraulics equipment. The hydraulic industry has seen many changes over recent years and numerous new techniques, components and methods have been introduced. The ninth edition of the Hydraulic Handbook incorporates all these developments to provide a crucial reference manual for practical and technical guidance.

Global Business Strategy Feb 12 2022 This book presents theories and case studies for corporations in developed nations, including Japan, for designing strategies to maximize opportunities and minimize threats in business expansion into developing nations. The case studies featured here focus on Asia, including China and India, and use examples of Japanese manufacturers. Five case studies are provided, including Hitachi Construction Machinery and Shiseido in China and Maruti Suzuki in India. These cases facilitate the reader's understanding of the business environments in emerging economies. This volume is especially recommended for business people responsible for international business development, particularly in China and India. In addition, the book serves as a useful resource for students in graduate-level courses in international management.

Kansas Curiosities Jun 23 2020 Your round-trip ticket to the wildest, wackiest, most outrageous people, places, and things the Sunflower State has to offer! Whether you're a born-and-raised Kansan, a recent transplant, or just passing through, *Kansas Curiosities* will have you laughing out loud as Pam Grout takes you on a rollicking tour of the strangest sides of the Sunflower State. Visit the Museum of the World's Largest Collection of the World's Smallest Versions of the World's Largest Things—and get your own largest ball starter kit. Meet more chainsaw-wielding, glow-in-the-dark-scrap-metal-zoo-building, grapefruit-peel-sculpting, papier-mâché-mixing, porcelain-pig-painting grassroots artists than you can shake a stick at! Get a load of Big Brutus, a sixteen-story coal shovel that has become a popular tourist attraction; and discover the thrill of an indoor hurricane—it'll blow you away.

World Business Directory Jan 19 2020

Unequal Gains Dec 10 2021 A book that rewrites the history of American prosperity and inequality *Unequal Gains* offers a radically new understanding of the economic evolution of the United States, providing a complete picture of the uneven progress of America from colonial times to today. While other economic historians base their accounts on American wealth, Peter Lindert and Jeffrey Williamson focus instead on income—and the result is a bold reassessment of the American economic experience. America has been exceptional in its rising inequality after an egalitarian start, but not in its long-run growth. America had already achieved world income leadership by 1700, not just in the twentieth century as is commonly thought. Long before independence, American colonists enjoyed higher living standards than Britain—and America's income advantage today is no greater than it was three hundred years ago. But that advantage was lost during the Revolution, lost again during the Civil War, and lost a third time during the Great Depression, though it was regained after each crisis. In addition, Lindert and Williamson show how income inequality among Americans rose steeply in two great waves—from 1774 to 1860 and from the 1970s to today—rising more than in any other wealthy nation in the world. *Unequal Gains* also demonstrates how the widening income gaps have always touched every social group, from the richest to the poorest. The book sheds critical light on the forces that shaped American income history, and situates that history in a broad global context. Economic writing at its most stimulating, *Unequal Gains* provides a vitally needed perspective on who has benefited most from American growth, and why.

Modeling and Control of Hybrid Propulsion System for Ground Vehicles Jul 17 2022

This book focuses on the systematic design of architectures, parameters and control of typical hybrid propulsion systems for wheeled and tracked vehicles based on a combination of theoretical research and engineering practice. Adopting a mechatronic system dynamics perspective, principles and methods from the fields of optimal control and system optimization are applied in order to analyze the hybrid propulsion configuration and controller design. Case investigations for typical hybrid propulsion systems of wheeled and tracked ground vehicles are also provided.

Let's Explore Needs and Wants Jan 31 2021 Audisee® eBooks with Audio combine professional narration and text highlighting for an engaging read aloud experience! Young readers will learn to distinguish between the things they really need (food and clothing) and the things they want (toys!) in this fun, fresh look at wants and needs.

Australian Official Journal of Trade Marks Apr 02 2021

Global Energetics of the Atmosphere Jul 25 2020 This book looks at global atmospheric processes from a physical standpoint using available current and past observational data taken from measurements of relevant atmospheric parameters. It describes various aspects of the current atmospheric state and its future evolution, focusing primarily on the energetic balance of the Earth and atmosphere, and taking into consideration the multi-faceted global equilibrium between these two systems, carbon, and water. The analysis presented in this book restricts itself to those objects and processes that allow us to obtain reliable conclusions and numerical estimations, in contrast to current climate models with much larger numbers of parameters for describing the same problems. As a result, in spite of the roughness of numerical parameters, the book unveils a reliable and transparent physical picture of energetic phenomena in the global atmosphere. In particular, it shows

that approximately only one-fourth of atmospheric water returns from the atmosphere to the Earth in the form of free molecules. It was shown that the contemporary warming of our planet has an anthropogenic character, and that the average global temperature increases due to an increase of the concentration of atmospheric CO₂ molecules, via an increase in atmospheric moisture, as well as an increase in the amount of aerosols in the atmosphere. Accumulation of atmospheric carbon dioxide plays a subsidiary role in this process and gives approximately one-third in a change of the global temperature, while an increase in the amount of atmospheric water by as little as only 0.3% per year explains the observed warming of the Earth. The book shows how the greenhouse instability of the atmosphere evidently has its origins in the Eocene epoch, presenting an analysis of the influence of various types of global energetic processes on the climate that differs from the official stance on these problems.

Ultrastructure of the Peripheral Nervous System and Sense Organs Apr 21 2020

Doing Business with China Jun 04 2021 Outline of matters of interest to those involved in or contemplating establishing business operations in China. It discusses the Chinese economy and administration system, foreign company operations, taxation issues, joint ventures and banking and investment.

Majalah TAMBANG Volume 17 No. 171 Dec 22 2022 Presiden Joko Widodo (Jokowi) tegas mengumumkan bakal menyetop ekspor bauksit mentah pada Juni 2023. Mineral lainnya bakal menyusul kemudian. Meskipun Indonesia dinyatakan kalah dalam gugatan World Trade Organization (WTO) soal nikel, Jokowi berkobar menyatakan bakal melawanbalik. Hasil hilirisasi nikel di dalam negeri terbukti ampuh mengerek ekonomi nasional, termasuk menggenjot geliat di daerah penghasil. Misalnya Maluku Utara, ekonominya moncer di tengah gempuran badai pandemi. Pemerintah ingin hal serupa merambat ke sektor lainnya, bauksit, tembaga, hingga timah.

10 at 10 Oct 28 2020 Audrey Hepburn, Roberto Clemente, Albert Einstein—kids know the names, but do they know what some of history's most famous figures were like at the age of ten? Carlyn Beccia presents ten brief and beautifully illustrated biographies to give young readers a fresh look at the lives of people they may only know through history books. Colorful timelines provide context and add additional details about these extraordinary lives.

Electrification of Heavy-Duty Construction Vehicles Nov 21 2022 The number of heavy-duty construction vehicles is increasing significantly with growing urban development causing poor air quality and higher emissions. The electrification of construction vehicles is a way to mitigate the resulting air pollution and emissions. In this book, we consider tracked bulldozers, as an example, to demonstrate the approach and evaluate the benefits of the electrification of construction vehicles. The book is intended for senior undergraduate students, graduate students, and anyone with an interest in the electrification of heavy vehicles. The book begins with an introduction to electrification of heavy-duty construction vehicles. The second chapter is focused on the terramechanics and interactions between track and blades with soil. The third chapter presents the

architecture and modeling of a series hybrid bulldozer. Finally, the fourth chapter discusses energy management systems for electrified heavy construction vehicles.
