When somebody should go to the book stores, search introduction by shop, shelf by shelf, it is in point of fact problematic. This is why we give the book compilations in this website. It will extremely ease you to see guide **Cosmos Of Light The Sacred Architecture Of Le Corbusier** as you such as.

By searching the title, publisher, or authors of guide you really want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be every best area within net connections. If you direct to download and install the **Cosmos Of Light The Sacred Architecture Of Le Corbusier**, it is very simple then, past currently we extend the link to purchase and make bargains to download and install **Cosmos Of Light The Sacred Architecture Of Le Corbusier** appropriately simple!

This is likewise one of the factors by obtaining the soft documents of this **Cosmos Of Light The Sacred Architecture Of Le Corbusier** by online. You might not require more times to spend to go to the book commencement as without difficulty as search for them. In some cases, you likewise accomplish not discover the revelation **Cosmos Of Light The Sacred Architecture Of Le Corbusier** that you are looking for. It will categorically squander the time.

However below, bearing in mind you visit this web page, it will be appropriately no question simple to get as competently as download lead **Cosmos Of Light The Sacred Architecture Of Le Corbusier**

It will not admit many become old as we explain before. You can accomplish it even though produce an effect something else at home and even in your workplace. suitably easy! So, are you question? Just exercise just what we offer below as skillfully as evaluation **Cosmos Of Light The Sacred Architecture Of Le Corbusier** what you as soon as to read!

Right here, we have countless book **Cosmos Of Light The Sacred Architecture Of Le Corbusier** and collections to check out. We additionally come up with the money for variant types and moreover type of the books to browse. The okay book, fiction, history, novel, scientific research, as capably as various supplementary sorts of books are readily available here.

As this **Cosmos Of Light The Sacred Architecture Of Le Corbusier**, it ends occurring subconscious one of the favored ebook **Cosmos Of Light The Sacred Architecture Of Le Corbusier** collections that we have. This is why you remain in the best website to look the incredible ebook to have.

Thank you enormously much for downloading **Cosmos Of Light The Sacred Architecture Of Le Corbusier**. Most likely you have knowledge that, people have look numerous period for their favorite books in the same way as this **Cosmos Of Light The Sacred Architecture Of Le Corbusier**, but end up in harmful downloads.

Rather than enjoying a good ebook as soon as a mug of coffee in the afternoon, then again they juggled as soon as some harmful virus inside their computer. **Cosmos Of Light The Sacred Architecture Of Le Corbusier** is understandable in our digital library an online admission to it is set as public hence you can download it instantly. Our digital library saves in multipart countries, allowing you to acquire the most less latency period to download any of our books in the manner of this one. Merely said, the **Cosmos Of Light The Sacred Architecture Of Le Corbusier** is universally compatible similar to any devices to read.

London has a unique series of churches built after the Great Fire of 1666, when most of the City of London was destroyed. Among these iconic churches are St Paul's, St Mary-le-Bow, St Bride's, St Clement Danes, St Martin-in-the-Fields, St Mary-le-Strand, St George Bloomsbury and Christ Church Spitalfields. They remain today as outstanding landmarks that define their local cityscapes. Designed by Sir Christopher Wren and his followers - Hawksmoor, Gibbs, Archer and James - these beautiful churches embody spiritual principles expressed through the conventions of Classical architecture. Underlying their outward, visible forms is sacred geometry, an ancient art that explores the invisible inner structure of the Cosmos and gives expression to it in physical form. In this book, Nigel Pennick explains the sacred geometry, spiritual symbols and emblems that make these churches among the most notable buildings of London. A comprehensive study of the sacred buildings built and designed by Frank Lloyd Wright, this book offers scholarly discussion with analytical drawings and photographs. These projects represent different periods of Wright's career (from 1886 to 1958), new building technologies, and application of his design concepts as demonstrated in his sacred architecture. This unique contribution will be useful to all those interested in Wright's architecture and theory as well as in sacred architecture. "The idea of sacred space has not been considered a relevant topic in recent architecture, a neglect even more pronounced in terms of debates about the city. The texts and projects in this book aim to redress this oversight, and re-open a contemporary understanding of its relevance. The book itself is the result of a year-long investigation developed in the AA's Diploma Unit 14. It consists of design proposals that range from a multi-faith school in Strasbourg to the reconstruction of a festival hall in the city of Xian, China; from a Jesuit monastery in Detroit to a women's Islamic centre in Paris. The book is complemented by essays by Pier Vittorio Aureli, Maria Shéhérazade Giudici and Hamed Khosravi." -- Provided by publisher. At a time dominated by the disappearance of Future, as claimed by the French anthropologist Marc Augé, Utopia and Religion seem to be two different ways of giving back an inner horizon to mankind. Therefore this book, on the one hand, considers the importance of utopia as a tool and how it offers an economic and social resource to improve cities' wealth, future and livability. On the other, it explores the impact of religious and cultural ideals on cities that have recently emerged in this context. Based on numerous observations, the book examines the intellectual legacy of utopian theory and practices across various academic disciplines. It also presents discussions, theories, and case studies addressing a range of issues and topics related to utopia. "Sacral buildings are the most distinguished architectural accomplishments throughout the history of humanity. The search for worthy shapes and structures to serve religious beliefs and rites led to many architectural milestones as well as pioneering technical and design developments. To this day, sacral buildings constitute the most prestigious, and at the same time most expressive, tasks for architects and designers. Masterpieces: Sacred Architecture + Design places churches, synagogues and mosques in a common context. The concept of presenting buildings of the three large monotheistic religions together identifies striking parallels and noticeable differences in contemporary sacral building architecture. Whether a tradition-based approach or an experimental play with shapes, whether the display of the greatest splendor or extreme minimalism - each presented project represents a

very individual way of experiencing religion and spirituality."--Publisher description. The churches of the Byzantine era were built to represent heaven on earth. Architecture, art and liturgy were intertwined in them to a degree that has never been replicated elsewhere, and the symbolism of this relationship had deep and profound meanings. Sacred buildings and their spiritual art underpinned the Eastern liturgical rites, which in turn influenced architectural design and the decoration which accompanied it. Nicholas N Patricios here offers a comprehensive survey, from the age of Constantine to the fall of Constantinople, of the nexus between buildings, worship and art. His identification of seven distinct Byzantine church types, based on a close analysis of 370 church building plans, will have considerable appeal to Byzantinists, lay and scholarly. Beyond categorizing and describing the churches themselves, which are richly illustrated with photographs, plans and diagrams, the author interprets the sacred liturgy that took place within these holy buildings, tracing the development of the worship in conjunction with architectural advances made up to the 15th century. Focusing on buildings located in twenty-two different locations, this sumptuous book is an essential guide to individual features such as the synthronon, templon and ambo and also to the wider significance of Byzantine art and architecture. "New Spiritual Architecture looks at ways in which contemporary architects are approaching religious or meditative space. The book focuses on churches, chapels, temples, synagogues and mosques that have been built in the last few years and that represent a late-twentieth/early-twenty-first century aesthetic. These buildings demonstrate how new ideas and developments in urban, domestic and public architecture are being used to inform design that is intended for inspiration, worship or meditation. The text discusses the ways in which architects manipulate light and space and considers the placement of these buildings in their surroundings. Following a brief introduction, the book explores the following five themes: New Traditions, Interventions, Retreats, Grand Icons, and Modest Magnificence. It includes 200 full-color illustrations and 100 line drawings."--BOOK JACKET. This edited volume, *Modern Architecture and the Sacred*, presents a timely reappraisal of the manifold engagements that modern architecture has had with 'the sacred'. It comprises fourteen individual chapters arranged in three thematic sections – *Beginnings and Transformations of the Modern Sacred*; *Buildings for Modern Worship*; and *Semi-Sacred Settings in the Cultural Topography of Modernity*. The first interprets the intellectual and artistic roots of modern ideas of the sacred in the post-Enlightenment period and tracks the transformation of these in architecture over time. The second studies the ways in which organized religion responded to the challenges of the new modern self-understanding, and then the third investigates the ways that abstract modern notions of the sacred have been embodied in the ersatz sacred contexts of theatres, galleries, memorials and museums. While centring on Western architecture during the decisive period of the first half of the 20th century – a time that takes in the early musings on spirituality by some of the avant-garde in defiance of *Sachlichkeit* and the machine aesthetic – the volume also considers the many-varied appropriations of sacrality that architects have made up to the present day, and also in social and cultural contexts beyond the West. For 1700 years, cathedrals have embodied the glory of God while serving as a physical representation of the power of the church and its leaders. This book captures the spell cast by these superb sacred buildings in magnificent photographs and informative text. Additional churches of significance are included, as well, for a total of 240 wonderful examples of sacred Christian architecture dating from the medieval period to modern times. A ground-breaking and enlightening exploration of the structures which elevate architecture to spirituality. *Sacred Spaces* showcases 30 of the most breath-taking, innovative, iconic and undiscovered examples of contemporary religious architecture, including work by well-known architects alongside emerging designers. Spanning all major religions and places of worship from intimate, reflective chapels and cemeteries to dramatic cathedrals and memorials, *Sacred Spaces* documents each project with lavish in-depth photography and drawings and texts by James Pallister that provide a modern historical context. An inspiring collection and thorough survey, the buildings in *Sacred Spaces* will appeal to architects and designers as well as the general public intrigued by creative culture, religion and spirituality. This book presents the challenges sacred architecture faced during the mid-20th century in America and explores how American architects pushed the envelope in the design of houses of worship. When *The Earth, the Temple, and the Gods* first appeared in 1962, it was hailed by the critics for its erudition, historical imagination and boldness. Subsequently, this comprehensive study of Greek temples and site-planning has been widely accepted as a landmark of architectural history, for it offers an inspired and arresting insight into nature and function of Greek sacred architecture. Vincent Scully, one of America's most brilliant and articulate scholars, understands the temples as physical embodiment of the gods in landscapes that had for the Greeks divine attributes and sacred connotations. He explores the meanings inherent in the calculated interaction between man-made sculptural forces and the natural landscape, and he relates this interaction to our understanding of Greek culture from the pre-Greek Aegean to the Hellenistic period. Years of research and travel were devoted to *The Earth, the Temple, and the Gods*. Scores of sites were restudied on the spot, including many lesser-known sanctuaries throughout the Hellenic world. The study includes reconstruction drawings, plans, and maps along with its richly illustrated, detailed discussions of major sites. "Place held sacred by a community, particularly ones with a rich architectural context, offer a fascinating subject for an artist. But there are temptations that ought to be resisted in a scholarly work, and so I have avoided an impulse to produce a "Great Churches of the Jersey Shore" kin of book. I have tried to look on all through the impartial lens of an Atget or Walk Evans or George Tice. The real subject of this inventory is not so much the architecture of the Jersey Shore and Pine Barrens communities, but the traditions and changes in function, scale, style, construction, and prominence of the churches, meetinghouses, and synagogues, and the cultural, social, economic and liturgical forces that shaped them. - from the Preface. The work includes all the surviving houses of worship in Ocean, Atlantic, Cape May, and the shore regions of Monmouth County, plus much of the Pine Barrens. Frank Greenagel's seminal work on the old churches and meetinghouses of New Jersey, titled 'The New Jersey Churchscape' was published by Rutgers University Press in 2001. His most recent book entitled 'An Architectural Stew' on the religious architecture of Middlesex County. 'Steeple Envy' is the title of his examination of the churches of Morris County, 'A Mighty Architectural Stout' is his work on the Essex County churchscape, and 'A Plausible Expression of Piety' details his work on the religious architecture of Hudson County. Greenagel is the author the article on religious architecture of the Encyclopedia of New Jersey, and of an essay on Methodist church architecture for 'New Jersey History,' the oldest scholarly journal published in America. His website dedicated to the old churches, meetinghouses and synagogues of the state, is www.njchurchscape.com. He is presently leading an effort to restore a late eighteenth-century Georgian manor in Phillipsburg." -Back cover. The building of religious structures represents a rare opportunity for the architect to concentrate on the creation of volume, space, and form. Sacred architecture is far less determined than other building tasks by functional requirements, norms, and standards. As a rule, it is free to unfold as pure architecture. Thus in design terms this building task offers enormous freedoms to the architect. At the same time, however, the special atmospherics of sacred spaces call, on the part of the architect, for a highly sensitive treatment of religion and the relevant cultural and architectural traditions. In a systematic section, this volume introduces the design, technical, and planning fundamentals of building churches, synagogues, and mosques. In its project section, it also presents about seventy realized structures from the last three decades. Drawing upon his in-depth knowledge of the subject and his many years of publishing experience, the author offers a valuable analysis of the conceptual and formal aspects that combine to create the religious impact of spaces (e.g., the ground plan, the shapes of the spaces, the incidence of light, and materiality). Please fill in marketing copy This book traces the historical identity of Kashmir within the context of Islamic religious architecture between early fourteenth and mid-eighteenth century. It presents a framework of syncretism within which the understanding of this architectural tradition acquires new dimensions and possibilities in the region. In a first, the volume provides a detailed overview of the origin and development of Islamic sacred architecture while contextualizing it within the history of Islam in Kashmir. Covering the entirety of Muslim rule in the region, the book throws light on Islamic religious architecture introduced with the establishment of the Muslim Sultanate in the early fourteenth century, and focuses on both monumental and vernacular architecture. It examines the establishment of new styles in architecture, including ideas, materials and crafts introduced by non-Kashmiri missionaries in the late-fourteenth to fifteenth century. Further, it discusses how the Mughals viewed Kashmir and embellished the land with their architectural undertakings, coupled with encounters between Kashmir's native culture, with its identity and influences introduced by Sufis arriving from the medieval Persianate world. The book also highlights the transition of the traditional architecture to a pan-Islamic image in the post-Independence period. With its rich illustrations, photographs and drawings, this book will interest students, researchers, and professionals in architecture studies, cultural and heritage studies, visual and art history, religion, Islamic studies and South Asian studies. It will also be useful to professional architecture institutes, public libraries, museums, cultural and heritage bodies as well as the general reader interested in the architectural and cultural history of South Asia. This volume examines the multifarious dimensions that constitute the workings of the Hindu temple as an architectural and urban built form. Eleven chapters reflect on Hindu temples from multiple standpoints - tracing their elusive evolution from wayside shrines as well as canonization into classical objects; questioning the role of treatises containing their building rules; analyzing their prescribed proportions and orders; examining their presence in, and as, larger sacred habitats and ritua... New edition for congregations planning to build or renew their church facilities. Now includes elements, which have become prominent in recent times including the use of visuals, electronic instruments, and the need for flexible space to accommodate the various configurations and multiple uses to which church space is put. The churches of the Byzantine era were built to represent heaven on earth. Architecture, art and liturgy were intertwined in them to a degree that has never been replicated elsewhere, and the symbolism of this relationship had deep and profound meanings.

Sacred buildings and their spiritual art underpinned the Eastern liturgical rites, which in turn influenced architectural design and the decoration which accompanied it. Nicholas N Patricios here offers a comprehensive survey, from the age of Constantine to the fall of Constantinople, of the nexus between buildings, worship and art. His identification of seven distinct Byzantine church types, based on a close analysis of 370 church building plans, will have considerable appeal to Byzantinists, lay and scholarly. Beyond categorizing and describing the churches themselves, which are richly illustrated with photographs, plans and diagrams, the author interprets the sacred liturgy that took place within these holy buildings, tracing the development of the worship in conjunction with architectural advances made up to the 15th century. Focusing on buildings located in twenty-two different locations, this sumptuous book is an essential guide to individual features such as the synthronon, templon and ambo and also to the wider significance of Byzantine art and architecture. By the tenth century CE, Mount Wutai had become a major pilgrimage site within the emerging culture of a distinctively Chinese Buddhism. Famous as the abode of the bodhisattva Mañjuśrī (known for his habit of riding around the mountain on a lion), the site in northeastern China's Shanxi Province was transformed from a wild area, long believed by Daoists to be sacred, into an elaborate complex of Buddhist monasteries. In *Building a Sacred Mountain*, Wei-Cheng Lin traces the confluence of factors that produced this transformation and argues that monastic architecture, more than texts, icons, relics, or pilgrimages, was the key to Mount Wutai's emergence as a sacred site. Departing from traditional architectural scholarship, Lin's interdisciplinary approach goes beyond the analysis of forms and structures to show how the built environment can work in tandem with practices and discourses to provide a space for encountering the divine. From early astrological and mythical influences, which determined the location, form and function of early monuments, this book travels through history, showing how the reflection of images of earth and heaven in architecture has all but disappeared. The sacred place was, and still is, an intermediate zone created in the belief that it has the ability to co-join the religious aspirants to their gods. An essential means of understanding this sacred architecture is through the recognition of its role as an 'in-between' place. Establishing the contexts, approaches and understandings of architecture through the lens of the mediating roles often performed by sacred architecture, this book offers the reader an extraordinary insight into the forces behind these extraordinary buildings. Written by a well-known expert in the field, the book draws on a unique range of cases, reflecting on these inspiring places, their continuing ontological significance and the lessons they can offer today. Fascinating reading for anyone interested in sacred architecture. The last decade has seen the emergence of a whole new generation of church designs. Covering buildings across the world, *Contemporary Church Architecture* aims to appeal not only to architects and clergy involved directly in ecclesiastical architecture but also other practitioners and those with a broader interest in cutting-edge design. This book covers the development of contemporary church design by looking at how the rational and the sacred can be reconciled and can inform one another. It also outlines the main trends and approaches: the conflict between self-expression and expression of the sacred, between sculptural signification and functionalism. Beautifully illustrated with around 350 photographs. In this book, a distinguished team of authors explores the way space, place, architecture, and ritual interact to construct sacred experience in the historical cultures of the eastern Mediterranean. Essays address fundamental issues and features that enable buildings to perform as spiritually transformative spaces in ancient Greek, Roman, Jewish, early Christian, and Byzantine civilizations. Collectively they demonstrate the multiple ways in which works of architecture and their settings were active agents in the ritual process. Architecture did not merely host events; rather, it magnified and elevated them, interacting with rituals facilitating the construction of ceremony. This book examines comparatively the ways in which ideas and situations generated by the interaction of place, built environment, ritual action, and memory contributed to the cultural formulation of the sacred experience in different religious faiths. Having won more than one recent poll as Britain's best-loved building, the appeal of Durham Cathedral appears abiding, which begs the question whether an iconic sacred building can retain meaning and affective pertinence for contemporary, secular visitors. Using the example of Durham Cathedral, this book sets out to explore wherein the appeal of historic churches lies today and considers questions of how and why their preservation into a post-Christian era should be secured. By including feedback from visitors to the cathedral, and the author's own very personal account of the cathedral in the form of an ekphrasis, this work seeks to privilege an interpretation of architecture that is based on the individual experience rather than on more conventional narratives of architecture history and cultural heritage policy. Recognising the implication of our choice of narrative on the perceived value of historic churches is crucial when deliberating their future role. This book puts forth a compelling case for historical sacred architecture, suggesting that its loss - through imperceptive conservation practices as much as through neglect or demolition - would diminish us all, secularists, atheists and agnostics included. Throughout the history of the built environment there has been no more significant endeavor than the construction of houses of worship, which were once the focal point around which civilizations and city-states developed. This book is the first to examine this topic across continents and from the perspective of multiple faiths. It addresses how sacred buildings are viewed in the context of contemporary architecture and religious practice. From St. Peter's Basilica in Rome to Notre-Dame in Paris, Christian churches represent some of our most significant architectural achievements, designed to evoke wonder and awe. Offering unprecedented access to a collection of revered religious landmarks, photographer Guillaume de Laubier takes readers on a stunning architectural tour. *Sacred Spaces* showcases breathtaking photographs of extraordinary churches and cathedrals, revealing original, illuminating views of icons, such as la Sagrada Familia in Barcelona, while also shedding light on lesser-known sites, such as Saint Basil's Cathedral in Moscow. Whether Catholic, Protestant, or Orthodox; made of wood, stone, concrete, or glass; Roman, Gothic, Baroque, or modern, the places of worship featured in this richly produced volume present an extraordinary overview of our architectural and cultural history. One of the great visionaries and pioneers of modern architecture, Le Corbusier was a master of light, declaring it both a fundamental basis of architecture and the key to personal well-being. In this portfolio of 160 photographs taken over 40 years, Henry Plummer captures Le Corbusier's inspired use of natural light in three of his greatest achievements: the small pilgrimage chapel at Ronchamp, the Dominican monastery of Sainte Marie de La Tourette, and the parish church of Saint-Pierre in Firminy-Vert, all in France. In these modest religious works Le Corbusier deploys light to create enchanted, emotionally charged spaces wedded to the cosmic rhythm of sunlight and season. *Cosmos of Light* reveals how the artist reimagined sacred space and charted new ways that buildings can both reveal and inhabit the universe around them. In every church building, art and architecture become the joint work of the Holy Spirit and the local community, in preparing a place to receive God's Word and to enter more fully into communion with him. In this volume, the bishops offer instruction on how to design places of worship that are dignified, beautiful, and "suited to sacred celebrations." An inspirational call for a return to the tenets of traditional architecture as a remedy for the dehumanizing standards of modern architecture

- Explains how modern architecture is emblematic of our current estrangement from the spiritual principles that shaped humanity's greatest civilizations
- Reveals how the ancient laws of sacred proportion and harmony can be restored

The ugly buildings that characterize the modern landscape are inferior not only to the great cathedrals of medieval Europe and the temples of ancient Egypt and Greece, but even to lesser buildings of the more recent past. The great masterworks of our ancestors spoke to humanity's higher nature. Architect Herbert Bangs reveals how today's dysfunctional buildings bring out the worst in humanity, reinforcing that which is most base within us. He shows how, through the ancient laws of proportion and number, architecture once expressed the harmonious relationship between man and the cosmos. In early times, the architect worked within a sacred and esoteric tradition of creating structures through which human beings could gain insight into the nature of the divine reality. Today, that tradition has been abandoned in favor of narrowly defined utilitarian principles of efficiency and economy. In *The Return of Sacred Architecture*, Bangs provides the key to freeing architecture from the crude functionality of the twentieth century: the architects of the modern human landscape must find the deep-felt connection to the cosmos that guided the inner lives of those who built the temples of the past. The form of their buildings will then reflect the sacred patterns of geometry and proportion and bring forth greater harmony in the world. This is a vivid, richly illustrated exploration of the symbolism and significance of sacred architectural forms from spires and minarets to pyramids and temples. In this book, a distinguished team of authors explores the way space, place, architecture, and ritual interact to construct sacred experience in the historical cultures of the eastern Mediterranean. Essays address fundamental issues and features that enable buildings to perform as spiritually transformative spaces in ancient Greek, Roman, Jewish, early Christian, and Byzantine civilizations. Collectively they demonstrate the multiple ways in which works of architecture and their settings were active agents in the ritual process. Architecture did not merely host events; rather, it magnified and elevated them, interacting with rituals facilitating the construction of ceremony. This book examines comparatively the ways in which ideas and situations generated by the interaction of place, built environment, ritual action, and memory contributed to the cultural formulation of the sacred experience in different religious faiths. This collection of twenty-three essays by Duncan Stroik shows the development and consistency of his architectural vision. Packed with informative essays and over 170 photographs, this collection clearly articulates the Church's architectural tradition. This timely book reflects an awakening of interest in religious faiths and the emergence of a 'global exchange of architecture and culture. While Spain's Rafael Moneo has recently completed a cathedral in Los Angeles, Britain's Thomas Heatherwick is designing a Buddhist temple in Japan, John Pawson is working on a Cistercian monastery in the Czech Republic and Richard Meier has completed his Jubilee Church in Rome. It seems, as one Wallpaper registered] pundit commented, 'religion is getting a redesign' and the architect's faith is as

unimportant as his or her nationality. Looking at ways in which contemporary architects are approaching religious or meditative space, this book focuses on churches, chapels, temples, synagogues and mosques that have been built in the last few years and that represent a late-twentieth/ early-twenty-first century aesthetic. Jeanne Halgren Kilde's survey of church architecture is unlike any other. Her main concern is not the buildings themselves, but rather the dynamic character of Christianity and how church buildings shape and influence the religion. Kilde argues that a primary function of church buildings is to represent and reify three different types of power: divine power, or ideas about God; personal empowerment as manifested in the individual's perceived relationship to the divine; and social power, meaning the relationships between groups such as clergy and laity. Each type intersects with notions of Christian creed, cult, and code, and is represented spatially and materially in church buildings. Kilde explores these categories chronologically, from the early church to the twentieth century. She considers the form, organization, and use of worship rooms; the location of churches; and the interaction between churches and the wider culture. Church buildings have been integral to Christianity, and Kilde's important study sheds new light on the way they impact all aspects of the religion. Neither mere witnesses to transformations of religious thought or nor simple backgrounds for religious practice, church buildings are, in Kilde's view, dynamic participants in religious change and goldmines of information on Christianity itself. This essential study develops new anthropological perspectives on religious architecture, including mosques, churches, temples and synagogues. Borrowing from a range of theoretical perspectives on space-making and material religion, the authors consider how religious buildings take their place in opposition to the secular surroundings and the neoliberal city; how they, as evocations of the sublime, help believers move beyond the boundaries of modern subjectivity; and how international heritage status may conflict with their function as community centres. The volume includes contributions from a wide range of disciplines and regions, anthropologists, social historians, and architects working in Brazil, India, Italy, Mali, the Netherlands, Russia, Spain, and the UK.
