The volume also includes one of Piero Sraffa's previously untranslated papers, where he discusses constant returns to scale, one of his central themes.

Handbook of Asian Criminology Dec 27 2020 The Handbook of Asian Criminology aims to be a key reference for international scholars with an interest in the broad theme of international criminology in general, and the Asian region in particular. Contextualization is a key theme in this book. The role of context is often underemphasized in international criminology, so the Handbook of Asian Criminology's premise that crime and the responses to it are best understood as deeply embedded in the cultural specificity of the environment which produces them will play a key role throughout the work. Attention will be given to country- and region specific attitudes

towards crime and punishment.

Hot Deformation and Processing of Aluminum Alloys Dec 15 2019 A comprehensive treatise on the hot working of aluminum and its alloys, *Hot Deformation and Processing of Aluminum Alloys* details the possible microstructural developments that can occur with hot deformation of various alloys, as well as the kind of mechanical properties that can be anticipated. The authors take great care to explain and differentiate hot working in the context of other elevated temperature phenomena, such as creep, superplasticity, cold working, and annealing. They also pay particular attention to the fundamental mechanisms of aluminum plasticity at hot working temperatures. Using extensive analysis derived from polarized light optical microscopy (POM), transmission electron microscopy (TEM), x-ray diffraction (XRD) scanning electron-microscopy with electron backscatter imaging (SEM-EBSD), and orientation imaging microscopy (OIM), the authors examine those microstructures that evolve in torsion, compression, extrusion, and rolling. Further microstructural analysis leads to detailed explanations of dynamic recovery (DRV), static recovery (SRV), discontinuous dynamic recrystallization (dDRX), discontinuous static recrystallization (dSRX), grain defining dynamic recovery (gDRV) (formerly geometric dynamic recrystallization, or gDRX), and continuous dynamic recrystallization involving both a single phase (cDRX/1-phase) and multiple phases (cDRX/2-phase). A companion to other works that focus on modeling, manufacturing involving plastic and superplastic deformation, and control of texture and phase transformations, this book provides thorough explanations of microstructural development to lay the foundation for further study of the mechanisms of thermomechanical processes and their application.
