Essay from the year 2011 in the subject Business economics - Accounting and Taxes, grade: 64, University of Westminster (Westminster Business School), course: Financial Accounting and Policy, language: English, abstract: Since the financial crisis in 2008 the topic regulation of the markets at all revived. The world was looking for guilty parties in Rating agencies, financial institutions, governments and lastly audit firms and institutions which gave them their working framework - the accounting standards. On the one hand the scream for more regulation in the private sector to protect the public good became louder and on the other

hand scientists were warning of such overbearing steps because they would be damaging the economy. This issue provides the basis for this paper where accounting is seen as an eco-nomic good. Accounting information is not costless to produce for the corporations and it raises compliance costs. On the one hand managers are using accounting rules that minimize information costs and on the other hand shareholders want ac-counting rules that improve their ability to control and monitor the manager's action. Theoretically, financial accounting and reporting should be objective, neutral and apolitical. However, the standard setting process can be influenced by external groups with different interests. The management and balancing of social, environmental and economic sustainability is one of the most complex and urgent challenges facing both private and public sector organizations today; with these challenges of sustainability posing many risks to, and many opportunities for,

advancing the aims and performance of organizations. Accounting and accountability processes and practices provide key tools to help organizations to more effectively identify and manage the risks and opportunities of sustainability. Popular features from the first edition are retained, whilst recent developments in theory and practice are accounted for. New substantive chapters on water resource accounting, carbon accounting, and decision making have been introduced and the book continues to benefit from a host of expert contributors from around the world, including Jesse Dillard, Rob Gray, Craig Deegan. This comprehensive and authoritative textbook will continue to be a key resource for students of accounting and sustainability, as well as being a vital tool for researchers. The third edition of Loftus' Financial Reporting has been updated for recent developments in the Australian Accounting Standards, including the release of the new Conceptual Framework. This text is

designed to be used across the 2nd and 3rd year financial accounting units. A hallmark feature of the text is that it provides both a conceptual understanding and a practical application of the accounting standards. For students, an understanding of the conceptual basis of accounting and the rationale behind the principles is crucial to the consistent application of standards in a variety of practical contexts. The Financial Reporting interactive e-text features a range of instructional media content designed to provide students with an engaging learning experience. This includes practitioner videos (from Ernst & Young), interactive worked problems and questions with immediate feedback. Loftus' unique resource can also form the basis of a blended learning solution for lecturers. This volume examines the work of ten sociologists who have been forgotten or neglected within contemporary sociology. Each chapter examines one of these marginalized scholars including a brief biographical sketch,

an overview of the selected theorist's work and significance, and the relevance of their work to one or more contemporary social issues. The much anticipated fourth edition of Craig Deegan's Financial Accounting Theory delivers authoritative and completely up to date material with the discussion of both existing theories and newer theories that have surfaced as financial reporting has become more international. This edition includes a new selection of modern 'Accounting Headlines' which provide current examples of organisations and individuals putting accounting theory into practice in both local and global settings. Financial Accounting Theory covers additional topics such as critical perspectives, public sector accounting and fair value. Workflows and processes are presented using enhanced visual charts to help demonstrate how accounting works in practice. Deegan presents the concepts in a clear and straightforward style, while challenging students to think critically about the range of accounting

theories. Financial Accounting Theory provides a sound basis for readers contemplating further research and develops habits of analytical reasoning and critical thinking. This exciting book is one of the first textbooks in the fast growing area of sustainability accounting. Contributed to, and edited by an impressive array of internationally renowned authorities, it focuses on the use of sustainability accounting both as an external accountability mechanism (external reporting) and as a tool for helping managers assess and manage the social and environmental impacts of their operations (management accounting). Using real-life examples and case studies to emphasize the links between the conceptual basis and issues in practice, this outstanding book addresses the growing interest among both practitioners and academics in social, environmental and ethical accountability, as interpreted through the lens of sustainable development. This book brings together recent research on interpersonal

relationships in education from a variety of perspectives including research from Europe, North America and Australia. The work clearly demonstrates that positive teacher-student relationships can contribute to student learning in classrooms of various types. Productive learning environments are characterized by supportive and warm interactions throughout the class: teacher-student and student-student. Similarly, at the school level, teacher learning thrives when there are positive and mentoring interrelationships among professional colleagues. Work on this book began with a series of formative presentations at the second International Conference on Interpersonal Relationships in Education (ICIRE 2012) held in Vancouver, Canada, an event that included among others, keynote addresses by David Berliner, Andrew Martin and Mieke Brekelmans. Further collaboration and peer review by the editorial team resulted in the collection of original research that this book comprises. The

volume (while eclectic) demonstrates how constructive learning environment relationships can be developed and sustained in a variety of settings. Chapter contributions come from a range of fields including educational and social psychology, teacher and school effectiveness research, communication and language studies, and a variety of related fields. Together, they cover the important influence of the relationships of teachers with individual students, relationships among peers, and the relationships between teachers and their professional colleagues. We have spent a great deal of time on the continued development of accounting and auditing standards, which are used as a primary component of corporate reporting, to reach today's financial reporting framework. However, is it possible to say that, currently, financial statements provide full and prompt disclosure? Or will they still be useful as a primary element with their current structures in corporate reporting? Undoubtedly, we are

deeply concerned about these issues in recent times. This volume contains chapters to discuss the today's and tomorrow's accounting and corporate reporting phenomena in a comprehensive and multidimensional way. Therefore, this book is organized into six sections: "Achieving Sustainability through Corporate Reporting", "International Standardization", "Financial Reporting Quality", "Accounting Profession and Behavioral Aspects", "Public Sector Accounting and Reporting", and "Managerial Accounting". Corporate Governance and Accountability presents students with a complete and current survey of the latest developments involving how a company is directed and controlled. Providing a broad research-based perspective, this comprehensive textbook examines global corporate governance systems, the role and responsibilities of the directorate, and the frameworks designed to ensure effective corporate accountability for stakeholders. A holistic approach to the subject

enables students to develop a well-rounded knowledge of corporate governance theory and practice, policy documents, academic research, and current debates, issues, and trends. Now in its fifth edition, this comprehensive view of the corporate governance agenda features fully revised content that reflects new research and global developments in codes of practice and governance and accountability mechanisms. In-depth chapters contain numerous real-world case studies and compelling debate and discussion topics, exploring corporate transparency, social responsibility, boardroom diversity, shareholder activism, and many other timely issues. The book explores the developing challenges and opportunities within the business and finance world which are likely to impact the accounting profession in the near future. It outlines a number of approaches to ensure that the accountants of the future are equipped with a useful awareness of some of the key topic areas that are quickly becoming a reality and

helps bridge the gap between academia and practice. The chapters are standalone introductory pieces to provide useful précis of key topics and how they apply to the accounting profession in particular. It aims to deliver key readings on 'hot topics' not addressed in other texts which the accounting profession is tackling or are likely to tackle soon. Hence the book provides accounting students and researchers a solid grounding in a broad range of highly relevant non-technical accounting themes, looking at the bigger environment in which future accountants will be operating, involving considerations of strategic corporate governance issues and highlighting competences beyond the standard technical accounting skill sets. Scott reveals vast amounts of financial accounting information drawn from recent research that has until now been hidden in academic journals. He provides a clear, easy-to-use framework for students to (1) place this information in a financial accounting context, (2) explain and

analyze the information intuitively and (3) to reveal the information's relevance in understanding the practice of accounting. Describing the field, spanning individual, organisation, societal and cultural perspectives in a cross-disciplinary manner, this is the premier reference tool for students, lecturers, academics and practitioners to gather knowledge about a range of important topics from the perspective of organisation studies. In recent years, Corporate Social Responsibility (CSR) reporting in China has been experiencing a rapid development and the number of social reports issued by Chinese enterprises shows a sharp increasing trend. This book investigates the evolution of such reporting practice in the country and the reasons behind it. In addition, it also examines the reporting quantity and quality of Chinese enterprises by applying the GRI (Global Reporting Initiative) as an evaluation tool. In response to policy documents so as to obtain the government's recognition and to

strive for more resources, state-owned enterprises, private enterprises and foreign-invested companies have made substantial efforts in social reporting in terms of quantity and coverage. However, it appears that there is still room for enhancing the quality of disclosure. The book also highlights the central government's economic, political and social roles in promoting, encouraging and controlling the development of CSR reporting. Corporate Social Responsibility (CSR) is an important issue in contemporary business, management and politics, especially since the launch of the United Nations Global Compact in 2000 as an initiative to encourage businesses worldwide to adopt sustainable and socially responsible policies, and to report on them. This book examines the theory and practice of CSR in Asia. The philosophical and ideological underpinnings of CSR are rooted in Anglo-American and European principles of liberal democratic rights, justice and societal structures. This book not only

considers the impact of Western CSR practices in Asia, but also provides much needed Asian perspectives on this issue. It investigates the operation of CSR in different countries across Asia, including China, Japan, Malaysia, Thailand and Bangladesh - comparing the different meanings given to CSR, and the varying degrees of success experienced in different national contexts. This book argues if CSR is ever to revolutionize the manner in which we trade then it is needs to open itself up to the full variety of social responsibility as it occurs around the world. The book re-maps and refines debates about CSR as a global phenomenon, and will be of great value to professionals making strategic decisions in the global business environment. Craig Deegan's Financial Accounting Theory provides a concise approach while comprehensively covering both traditional and contemporary theories that have emerged as the practice of accounting has evolved. Social and environmental accountability and reporting

issues are discussed in depth, along with coverage of critical perspectives, public sector accounting and fair value. Instructors and students value Financial Accounting Theory for its reader-friendly style using straightforward explanations and numerous practical examples. This new edition continues to follow this approach with the addition of *NEW* content focusing on how different perspectives of organisational responsibilities and 'accountabilities' impact the way accounting is performed, and the theories that different researchers choose to use/apply. Written by one of ANZ's premier sustainability and social accounting academics, An Introduction to Accounting: Accountability in Organisations and Society brings today's accounting hot topics of corporate accountability, sustainability and social responsibility to life with the only complete textbook created from the ground up for these modern accounting teaching and learning concepts. An Introduction to

Accounting: Accountability in Organisations and Society takes a unique approach in embracing from the start the notion of accountability for the environment and sustainability in accounting; the structure, content and learning activities provide students with an understanding of accounting's pervasive and transformative role as a social practice and organisational driver. It shows that environments, ideas and values change; the interconnectivity of society; that the planet must be respected as a resource; and that people are affected/influenced by the information they receive and the way it is presented. It is emphasised that accounting and accountability are key aspects of every person's life and that the practice of accounting, while often being seen as very technical in nature, has many social implications. Learning accounting through the lens of sustainability and the environment embeds this perspective in students' minds so that in their careers they will actively seek and use accounting information to

make decisions that take into consideration accountability for the environment. Premium online teaching and learning tools are available on the MindTap platform. Learn more about the online tools here: cengage.com.au/mindtap

Norman Daniels examines the medical policies and health care dilemmas. Given the increased social and environmental problems in China, this book looks into the social and environmental (environmental) disclosure practices of socially responsible Chinese listed firms by constructing a stakeholder-driven, three-dimensional, disclosure index. The book contains a three-part study: the first part explores the current status of social and environment disclosure practices. The second part empirically examines the relationship between corporate social and environmental disclosure and various influencing factors (i.e. stakeholders' power and corporate characteristics). The third part empirically examines the link between corporate social responsibility (CSR) reporting (i.e.

publishing a CSR report and the quality of the CSR report) and socially responsible reputation. The book finds that the CSR report provided more stakeholder-relevant social and environmental disclosure than the annual report. It also finds that corporate characteristics such as firm size, profitability and industry classification are all statistically significant factors influencing social and environmental disclosure of the Chinese firms studied. Shareholders significantly influenced firms' social and environmental disclosure, and creditors significantly influenced firms' disclosure related to their environmental performance. The final part of the study reports that publishing a CSR report and CSR reporting quality had a positive influence on firms' socially responsible reputation and that the CEO/chairman duality negatively influenced firms' socially responsible reputation. The book also highlights that financial performance and firm size were the two corporate characteristics

that had a positive influence on corporate socially responsible reputation. This book will be of interest to those who are keen to learn more about corporate social responsibilities in the context of Chinese firms. Australia's market-leading financial accounting text provides students with a detailed grasp of reporting requirements in an accessible and engaging manner. Fully updated throughout, AUSTRALIAN FINANCIAL ACCOUNTING further develops and extends its coverage of consolidations and encompasses topical issues such as social and environmental accounting. Renowned for his clear writing style, Craig Deegan successfully communicates the detail necessary to understand, challenge and critically evaluate financial reporting. Complete in theoretical and practical coverage, this text gives students a strong foundation for current study and their future professional lives. Long a fruitful area of scrutiny for students of organizations, the study of institutions is

undergoing a renaissance in contemporary social science. This volume offers, for the first time, both often-cited foundation works and the latest writings of scholars associated with the "institutional" approach to organization analysis. In their introduction, the editors discuss points of convergence and disagreement with institutionally oriented research in economics and political science, and locate the "institutional" approach in relation to major developments in contemporary sociological theory. Several chapters consolidate the theoretical advances of the past decade, identify and clarify the paradigm's key ambiguities, and push the theoretical agenda in novel ways by developing sophisticated arguments about the linkage between institutional patterns and forms of social structure. The empirical studies that follow—involving such diverse topics as mental health clinics, art museums, large corporations, civil-service systems, and national polities—illustrate the explanatory power of

institutional theory in the analysis of organizational change. Required reading for anyone interested in the sociology of organizations, the volume should appeal to scholars concerned with culture, political institutions, and social change. This book explores recent developments in the theory, strategic perspective and international practice of corporate social responsibility. In particular it discusses the consequences of the economic slowdown apparent in many economies and the impact of changes in the regulatory environment. It consists of three parts: Part one addresses a variety of theoretical approaches as well as the dynamics and criticism of corporate social responsibility. It takes into account social and governmental expectations for the new and extended role of companies in the economy and in society, and provides a new context and theoretical assumptions regarding the functions and tasks of corporate social responsibility. Part two discusses the practical aspects relating to

strategic management and corporate governance, corporate disclosure and reporting, as well as the empowerment of stakeholders. Lastly, part three focuses on the international practice of corporate social responsibility in various organizational and institutional settings. Using numerous case studies, the book explores the challenges and tasks of CSR in emerging markets, in the fashion industry and in global and family companies. It identifies the changes that can be detected following the financial crisis, closing the loop and linking the empirical findings with the revised theoretical framework. Financial accounting theory has numerous practical applications and policy implications, for instance, international accounting standard setters are increasingly relying on theoretical accounting concepts in the creation of new standards; and corporate regulators are increasingly turning to various conceptual frameworks of accounting to guide regulation and the interpretation of accounting practices.

The global financial crisis has also led to a new found appreciation of the social, economic and political importance of accounting concepts generally and corporate financial reporting in particular. For instance, the fundamentals of capital market theory (i.e. market efficiency) and measurement theory (i.e. fair value) have received widespread public and regulatory attention. This comprehensive, authoritative volume provides a prestige reference work which offers students, academics, regulators and practitioners a valuable resource containing the current scholarship and practice in the established field of financial accounting theory. *Innovation and Sustainable Manufacturing: Research and Development* addresses the manufacturing sustainability challenge from different points of view, drawing on research from different disciplines to shed light on the latest green technologies, green product design methods, and materials. Addressing the needs of practitioners as well as academics, this book

examines a range of important themes such as environmental impacts and how to assess them, how to set boundary conditions to include or exclude downstream supply chains, how to improve sustainability without sacrificing productivity, the cost benefits of sustainability, and how to trace impacts in manufacturing. By providing a thorough review of global research in this field, *Innovation and Sustainable Manufacturing* acts as an ideal entry point into this discipline for researchers, and a guide to the latest developments for forward-thinking practitioners. Covers how different stages of the manufacturing supply chain can impact on sustainability Combines research from a variety of disciplines to provide a comprehensive coverage of this complex subject Explores the relationship between sustainability and other goals such as productivity, quality, and profitability Historically, the study of corporate social responsibility (CSR) reporting has largely been within the context of Western economies.

However, in the wake of highly publicized incidents such as Bhopal and the struggle of the Ogoni people in Nigeria, many large corporations now claim to be taking steps to improve their environmental and social performance within developing countries. Using the lens of stakeholder theory, this book examines whether the current practice of CSR reporting in developing countries is motivated by a desire to discharge accountability to all relevant stakeholders or whether it is being driven by the imperative of advancing corporate economic interests. While concepts like CSR reporting have become more fashionable, they vary widely in different national contexts; this book therefore clarifies the types and roles of CSR reporting and the underlying corporate motivations. The author considers the current CSR reporting practices in a number of developing countries, with particular attention given to illuminating a case study of Bangladesh. 1785/1918 includes material issued previously in

A comprehensive foundation for stakeholder theory, written by many of the most respected and highly cited experts in the field. As global concerns grow surrounding the environment, climate, and sustainability, International Perspectives on Sustainability Reporting presents business case studies from different sectors across different regions, highlighting the changing institutional contexts and laws in each country regarding sustainability reporting. This book provides the first systematic book length study of political parties across Central Europe since 1989, and provides new tools and

conceptual frameworks that can be used to explain party politics in other regions across the globe. Grounded Theory (GT) is one of the oldest and most often used forms of qualitative research. Unlike other methods, GT is used to develop theory. Grounded Theory has great potential for social work because in order to conduct theory-based practice, social workers need middle-range theories that are neither highly abstract nor difficult to apply in real life. Social work and Grounded Theory focus on the interaction of individual and society. GT studies can provide theories about how individuals navigate their surroundings that can be tested in social work practice and, ultimately, be used to guide social work practitioners. In this volume, readers will find discussions of the common roots of social work and Grounded Theory, the basic characteristics of grounded theory research, and issues of quality in grounded theory research. In addition, practical guidelines and suggestions are provided for conducting

grounded theory research, from writing the proposal to advanced data analysis. Exemplars from social work literature are used to illustrate grounded theory research in different social work fields. With practice exercises, guidelines for formulating problems and gathering and analyzing data, tips for working with software, consideration of ethical and Institutional Review Board issues, and discussion of new developments such as mixed-method and synthesis, this pocket guide offers social work researchers a strong, practical introduction to GT research. Written by Craig Deegan, Australia's premier sustainability and social accounting academic, *An Introduction to Accounting: Accountability in Organisations and Society* is the only resource in the market that brings corporate accountability, sustainability, and social responsibility together to provide a unique offering within the introductory accounting market. An adaptation of McGraw-Hill Australia's financial accounting text Australian Financial Accounting by Craig Deegan, authored by Anne Marie Ward of Ulster University. It communicates the detail necessary to understand, challenge and critically evaluate financial reporting. What is my theory? How do I choose a theory? Why and how should I employ a particular method for collecting the empirical data? These basic questions concern everyone involved in research. A research study can be a voyage of discovering or choice of theoretical perspective as well as gathering empirics or facts on a problem or situation. This book provides a good guideline as to why and

how to choose a particular theory or method to study an organisational phenomenon such as accounting. All the chapters provide both retrospective and contemporary views by scholars in the field. Each chapter documents the latest developments and research in accounting and control systems and provides valuable insights into methodological perspectives in accounting research. This second edition has also introduced a number of new chapters covering strategy-management control as practice, grounded theory approach, institutional logic and rhetoric, social interaction theory, actor-network theory and practice theory. The book is primarily intended for research students and academic researchers. It can also be used for undergraduate Honours course as well as postgraduate accounting and business methodology courses. Research organisations and consulting firms in accounting and business fields may also find this book useful. The principal aims of this second edition

are (1) to update the chapters previously published in 2006 and (2) to introduce new chapters documenting recent developments in accounting research. Financial Accounting 8e continues to be the market-leading and most highly regarded product for the changing needs of today's instructors and students. This edition has been redesigned to make the content more concise, accessible and easy to use for students, as well as prepare them for a future career in financial accounting. NEW to this edition: * Real world examples: more applied and practical examples that focus on the 'how to' of financial accounting. * Currency: comprehensive and up-to-date coverage of areas such as financial statement presentation, the conceptual framework for financial reporting, accounting for leases, revenue recognition, financial instruments and corporate social responsibility reporting. Second edition of a 1992 Australian adaptation of a US text for undergraduate and postgraduate students of accounting theory. Focuses separately on the theoretical and professional approaches to accounting. Includes student exercises, index and tables. The authors

are Australian and US academics. This book develops the idea that since decolonisation, regional patterns of security have become more prominent in international politics. The authors combine an operational theory of regional security with an empirical application across the whole of the international system. Individual chapters cover Africa, the Balkans, CIS Europe, East Asia, EU Europe, the Middle East, North America, South America, and South Asia. The main focus is on the post-Cold War period, but the history of each regional security complex is traced back to its beginnings. By relating the regional dynamics of security to current debates about the global power structure, the authors unfold a distinctive interpretation of post-Cold War international security, avoiding both the extreme oversimplifications of the unipolar view, and the extreme deterritorialisations of many globalist visions of a new world disorder. Their framework brings out the radical diversity of security dynamics in different parts of the world.
