The project has focused on the identification of state-of-the-art methods and strategy for acreage and yield estimation, based on an assessment of the existing monitoring methodology, optimized through the use of remote sensing. In addition, the project benefitted from the availability of multi-temporal satellite images for testing and monitoring of a range of crops in 3 selected pilot areas: the provinces of Zanzan and Mazandaran and the region of the south of Kerman. The publication reports data collected, processes followed and results obtained at this stage of the still not completely concluded study.
