In an effort to improve student achievement, thousands of US schools have adopted school reform models devised externally by universities and other organizations. Such models have been successful in improving individual schools or groups of schools, but what happens when educational reform attempts to extend from one school to many? Through qualitative data from several studies, this book explores what happens when school reform 'goes to scale'. Topics covered include: *why and how schools are adopting reforms *the influence of the local context and wider constraints on the implementation of reform *teachers and principals as change agents in schools *the evolution of reform design teams *the implementation, sustainability and expiration of reform, and its impact on educational change Each chapter concludes with guidelines for policy and practice. This book will be of interest to educational leaders and staff developers, educational researchers and policy makers, in

the US and internationally. Ecocriticism and the Idea of Culture: Biology and the Bildungsroman draws on work by Kinji Imanishi, Frans de Waal, and other biologists to create an interdisciplinary, materialist notion of culture for ecocritical analysis. In this timely intervention, Feder examines the humanist idea of culture by taking a fresh look at the stories it explicitly tells about itself. These stories fall into the genre of the Bildungsroman, the tale of individual acculturation that participates in the myth of its complete separation from and opposition to nature which, Feder argues, is culture's own origin story. Moving from Voltaire's Candide to Mary Shelley's Frankenstein and from Virginia Woolf's Orlando to Jamaica Kincaid's Lucy, the book dramatizes humanism's own awareness of the fallacy of this foundational binary. In the final chapters, Feder examines the discourse of animality at work in this narrative as a humanist fantasy about empathy, one that paradoxically excludes other animals from the ethical community to justify the continued domination of both human and nonhuman others. Analyzes approaches to the study of complexity in the physical, biological, and social sciences. Whether you are studying at a university, college, evening

classes, or high school, this essential book will help you to work without supervision and to realize your full potential. With special sections on writing correct English and a helpful review of basic mathematics, this little book goes a long way to giving you the confidence you seek to do well in school. A comprehensive guide to Michigan's wild-growing seed plants Take some of the mystery out of a walk in the woods with this new field guide from the author of Reading the Forested Landscape. Thousands of readers have had their experience of being in a forest changed forever by reading Tom Wessels's Reading the Forested Landscape. Was this forest once farmland? Was it logged in the past? Was there ever a major catastrophe like a fire or a wind storm that brought trees down? Now Wessels takes that wonderful ability to discern much of the history of the forest from visual clues and boils it all down to a manageable field guide that you can take out to the woods and use to start playing forest detective yourself. Wessels has created a key—a fascinating series of either/or questions—to guide you through the process of analyzing what you see. You'll feel like a woodland Sherlock Holmes. No walk in the woods will ever be the same. Design and develop

This work examines customs and habits such as crayfish parties, Christmas celebrations, and graduation rituals. The focus is not on the traditions as such, instead they provide a starting point for analyses of how the experiences of everyday life are manifested in a visible cultural garb. The text shows how many rituals serve to release people from the bonds of tradition, usually by creating a special cultural arena. Yet it also examines the ways in which habits and customs tacitly coerce thoughts, sometimes drawing attention to fundamental social and moral values but just as often acting as impediments to reflection. The contributors try to see how some features of everyday cultural identity can be easily replaced, while others may persist tenaciously. Quick activities

In Culture, Relevance, and Schooling: Exploring Uncommon Ground, Lisa Scherff, Karen Spector, and the contributing authors conceive of culturally relevant and critically minded pedagogies in terms of opening up new spatial, discursive, and/or embodied learning terrains. Readers will traverse multiple landscapes and look into a

variety of spaces where attempts to tear down or build up pedagogical borders based upon socially-just design are underway. In disciplines ranging from elementary science, to high school English, to college kinesiology, the contributors to this volume describe their attempts to remake schooling in ways that bring hope and dignity to their participants. Decentralization is widely discussed in the literature. Katharina Mewes gives an introduction to the theoretical and practical dimensions of decentralization in an accessible and systematic way. On the example of the reform process for the Yemeni Urban Water Supply and Sanitation (UWSS) sector, she links the theoretical, conceptual, and methodological aspects of decentralization to empiric problems. This book is valuable reading for researchers and students of political science, environmental and water studies, development researchers and regional experts. These Proceedings contain the contributions of the participants of the Second International Symposium on Dendritic Cells that was held from the 1st to 25th of June 1992 in Amsterdam, the Netherlands. The First International Symposium on Dendritic Cells was organized as a Satellite symposium at the occasion of the 30th

anniversary of the Japanese Reticuloendothelial Society by Dr. Y. Imai in Yamagata (Japan), in 1990. It was entitled "Dendritic Cells in Lymphoid Tissues," and focused primarily on the Interdigitating Cells (IDC), Epidermal Langerhans cells (LC) and Follicular Dendritic Cells (FDC) , from the point of view of human pathology. However, the concept of Dendritic Cell System, comprising the bone marrow derived IDC and LC but not the FDC, was based on animal experiments and mainly on in vitro experiments on isolated cells. In a report from the Reticuloendothelial Society Committee on Nomenclature in 1982, Tew, Thorbecke and Steinman had already characterized these different types of DC, but the gap between in vivo and in vitro function remained. In Amsterdam, the Symposium focused on the Role of Dendritic Cells in Fundamental and Clinical Immunology. First, recent developments in molecular biology of antigen presentation and cell biological aspects of signal transduction were discussed, in relation to the potential of DC to stimulate lymphocytes and to trigger their in vitro differentiation. This book covers applications of computational techniques to biological problems. These techniques are based

by an ever-growing number of researchers with different scientific backgrounds - biologists, chemists, and physicists. The rapid development of molecular biology in recent years has been mirrored by the rapid development of computer hardware and software. This has resulted in the development of sophisticated computational techniques and a wide range of computer simulations involving such methods. Among the areas where progress has been profound is in the modeling of DNA structure and function, the understanding at a molecular level of the role of solvents in biological phenomena, the calculation of the properties of molecular associations in aqueous solutions, computationally assisted drug design, the prediction of protein structure, and protein - DNA recognition, to mention just a few examples. This volume comprises a balanced blend of contributions covering such topics. They reveal the details of computational approaches designed for biomolecules and provide extensive illustrations of current applications of modern techniques. A broad group of readers ranging from beginning graduate students to molecular biology professions should be able to find useful contributions in this selection of reviews. To those on the outside, the Powells are a happy

family, but then a devastating accident destroys their fragile facade. When seven-year-old Henry is blamed for the tragedy, he tries desperately to make his parents happy again. As Henry grows up, he is full of potential—a talented sportsman with an academic mind and a thirst for adventure—but soon he questions if the guilt his parents have burdened him with has left him unable to escape his anguished family or their painful past. With a delicate touch and masterful attention to detail, New York Times bestselling author Elizabeth Flock invites us to meet a man both ordinary and extraordinary, and to experience a life that has yet to be lived. This book aims to bridge the gap between ecotoxicology and limnology. The intended readers of the book are water managers, policy makers with a scientific background as well as researchers/advisors in the area of water management. The book provides an ecotoxicological perspective on lake management and describes eutrophication of shallow, temperate lakes. It surveys the influence of toxic substances (e.g., agricultural pesticides) on the aquatic ecosystem, especially the relation between algae and daphnids. The message of the book is that nutrients such as

phosphorus are not the only important factor in explaining and managing eutrophication: toxic disturbance of to-down control is also an important factor to be considered. The results of extensive studies and experiments (some unpublished) on lake eutrophication are presented in this book. Corporate social responsibility has gained substantial traction in recent decades but many still struggle with conveying the importance of integrating ethics and environmental and social values within the demands of a business world understandably concerned with making profit. This new edition helps readers get to grips with improving their organisation's environmental management, sustainability, health and safety and trading ethics with straightforward guidance and tips. A new **◀Do The Right Thing▶ Model** assists organisations with identifying risks and frames corporate social responsibility in a business context accessible to all. Features include: An updated **Do the Right Thing Model** aligned to the

new ISO high level structure for management system standards 20 global case studies to demonstrate how the model can impact performance A corporate social responsibility policy template for your organisation's use Helpful 'Test your thinking' exercises to check your understanding and stretch your working knowledge 100 practical actions for you to start implementing today This is an essential introduction to the complex areas of corporate social responsibility that affect health and safety practitioners, environmental managers, human resources personnel and those working with quality and business assurance. It will also be critical reading for those looking to understand how CSR fits into the new high level structure of ISO 9001, ISO 14001 and ISO 45001. Although fiction writers must concern themselves with "big picture" issues such as plot, theme, and character development, much of the day-to-day work of writing involves finding answers to seemingly minor questions: How should I describe the exterior of a house? How can I construct the voice of a historical narrator with authenticity? How should I depict a physically atypical character? Few books on the market address the problems and opportunities present

in these and other questions, yet they are the ones that most writers grapple with on a daily basis. *Danger on the Page: A Fiction Writer's Guide to Sex, Violence, Dead Narrators, and Other Challenges* identifies and explores some of the more common and intractable situational challenges of fiction writing, with chapters grouped into the general subject areas such as scenes, characters, points of view, and settings. Shawver delves into the pitfalls and opportunities of writing about sex, violence, sports, and love; he examines writing from the perspective of a different race, gender, or species; he interrogates conventional beliefs about the use of brand names, the description of architecture, and the portrayal of nature. Throughout, he gives dozens of examples from both literary and commercial fiction so readers can borrow (or reject) other writers' techniques and explore the myriad challenges of fiction writing on their own. A lively and witty approach to a diverse range of specific writing issues, Shawver's book will appeal especially to intermediate-level writers seeking to bring their craft to the next level.
