Rules of Sociological Method May 10 2022 First published in 1895: Emile Durkheim's masterful work on the nature and scope of sociology--now with a new introduction and improved translation by leading scholar Steven Lukes. The Rules of the Sociological Method is among the most important contributions to the field of sociology, still debated among scholars today. Through letters, arguments, and commentaries on significant debates, Durkheim confronted critics, clarified his own position, and defended the objective scientific method he applied to his study of humans. This updated edition offers an introduction and extra notes as well as a new translation to improve the clarity and accessibility of this essential work. In the introduction, Steven Lukes, author of the definitive biography Emile Durkheim: His Life and Work, spells out Durkheim's intentions, shows the limits of Durkheim's view of sociology, and presents its political background and significance. Making use of the various texts in this volume and Durkheim's later work, Lukes discusses how Durkheim's methodology was modified or disregarded in practice--and how it is still relevant today. With substantial notes on context, this user-friendly edition will greatly ease the task of students and scholars working with Durkheim's method--a view that has been a focal point of sociology since its original publication. The Rules of the Sociological Method will engage a new generation of readers with Durkheim's rich contribution to the field."

Great Breeders and Their Methods Apr 28 2021 The great Thoroughbred stallions of the 20th Century have one thing in common - the Hancock family. As independent breeders, as salesmen and promoters, as innovators and as conservators of racing and breeding, four generations of the Hancock family have played a vital role in the development of the Thoroughbred. From the original Ellerslie Farm in Virginia to Claiborne Farm and Stone Farm in Kentucky, the Hancocks have been a dominant force in the American and, indeed, the international racing scene. It has been said that the secret to the success of the Hancocks was the philosophy that success lies not in breeding the occasional champion, but rather in controlling the bloodlines of the champions of the future. Here are the business strategies, the breeding theories, the champion horses of the generations of diligent, insightful men who have given so much to the industry

Miracle Mongers and Their Methods Oct 23 2020 Fire has always been and, seemingly, will always remain, the most terrible of the elements. To the early tribes it must also have been the most mysterious; for, while earth and air and water were always in evidence, fire came and went in a manner which must have been quite unaccountable to them. Thus it naturally followed that the custom of deifying all things which the primitive mind was unable to grasp, led in direct line to the fire-worship of later days. That fire could be produced through friction finally came into the knowledge of man, but the early methods entailed much labor. Consequently our ease-loving forebears cast about for a method to "keep the home fires burning" and hit upon the plan of appointing a person in each community who should at all times carry a burning brand. This arrangement had many faults, however, and after a while it was superseded by the expedient of a fire kept continually burning in a building erected for the purpose. The Greeks worshiped at an altar of this kind which they called the Altar of Hestia and which the Romans called the Altar of Vesta. The sacred fire itself was known as Vesta, and its burning was considered a proof of the presence of the goddess. The Persians had such a building in each town and village; and the Egyptians, such a fire in every temple; while the Mexicans, Natches, Peruvians and Mayas kept their "national fires" burning upon great pyramids. Eventually the keeping of such fires became a sacred rite, and the "Eternal Lamps" kept burning in synagogues and in Byzantine and Catholic churches may be a survival of these customs.

Coral Gardens and Their Magic - A Study of the Methods of Tilling the Soil and of Agricultural Rites in the Trobriand Islands Jul 20 2020 This is volume II of "Coral Gardens and Their Magic", dealing with Kilivila terms related to gardening and agriculture. Kilivila is the language spoken on the Trobriand islands, a group of islands off the east coast of New Guinea. This volume will appeal to those with an interest in anthropology and Trobriand culture, and it would make for a fantastic addition to collections of allied literature. Contents include: "Language as Tool, Document, and Cultural Reality", "The Translation of Untranslatable words", "The Context of Words and the Context of Facts", "The Pragmatic Setting of Utterances", "Meaning as Function of Words", "The Sources of Meaning in the Speech of Infants", "Gaps, Gluts and Vagaries of a Native Terminology", etc. Many vintage books such as this are increasingly scarce and expensive. It is with this in mind that we are republishing this volume now in an affordable, modern, high-quality edition complete with a specially-commissioned new biography of the author.

Complexity, Heterogeneity, and the Methods of Statistical Physics in Economics Feb 07 2022 This book systematically provides a prospective integrated approach for complexity social science in its view of statistical physics and mathematics, with an impressive collection of the knowledge and expertise of leading researchers from all over the world. The book mainly covers both finitary methods of statistical equilibrium and data-driven analysis by econophysics. The late Professor Masanao Aoki of UCLA, who passed away at the end of July 2018, in his later years dedicated himself to the reconstruction of macroeconomics mainly in terms of statistical physics. Professor Aoki, who was already an IEEE fellow, was also named an Econometric Society Fellow in 1979. Until the early 1990s, however, his contributions were focused on the new developments of a novel algorithm for the time series model and their applications to economic data. Those contributions were undoubtedly equivalent to the Nobel Prize-winning work of Granger's "co-integration method". After the publications of his New Approaches to Macroeconomic Modeling and Modeling Aggregate Behavior and Fluctuations in Economics, both published by Cambridge University Press, in 1996 and 2002, respectively, his contributions rapidly became known and spread throughout the field. In short, these new works challenged econophysicists to develop evolutionary stochastic dynamics, multiple equilibria, and externalities as field effects and revolutionized the stochastic views of interacting agents. In particular, the publication of Reconstructing Macroeconomics, also by Cambridge University Press (2007), in cooperation with Hiroshi Yoshikawa, further sharpened the process of embodying "a perspective from statistical physics and combinatorial stochastic processes" in economic modeling. Interestingly, almost concurrently with Prof. Aoki's newest development, similar approaches were appearing. Thus, those who were working in the same context around the world at that time came together, exchanging their results during the past decade. In memory of Prof. Aoki, this book has been planned by authors who followed him to present the most advanced outcomes of his heritage.

Brain Mapping: The Methods Aug 21 2020 Investigation of the functional architecture of the human brain using modern noninvasive imaging techniques is a rapidly expanding area of research. A proper knowledge of methodology is needed to appreciate the burgeoning literature in the field. This timely publication provides an excellent catalogue of the main techniques. The authors offer an invaluable analysis of mapping strategies and techniques, providing everything from the foundations to the major pitfalls and practical applications of the modern techniques used in neuroimaging. Contains over 1000 full color pages with more than 200 color figures. Spanning the methodological gamut from the molecular level to the whole brain while discussing anatomy, physiology, and pathology, as well as their integration, Brain Mapping: The Methods, 2e, brings the reader a comprehensive, well-illustrated and entirely readable description of the methods for brain mapping. Drs. Toga and Mazziotta provide everything from the foundations to the major pitfalls and practical applications of the technique by assembling an impressive group of experts, all widely known in their field, who contribute an outstanding set of chapters.

The Methods of Distances in the Theory of Probability and Statistics Jan 14 2020 This book covers the method of metric distances and its application in probability theory and other fields. The method is fundamental in the study of limit theorems and generally in assessing the quality of approximations to a given probabilistic model. The method of metric distances is developed to study stability problems and reduces to the selection of an ideal or the most appropriate metric for the problem under consideration and a comparison of probability metrics. After describing the basic structure of probability metrics and providing an analysis of the topologies in the space of probability measures generated by different types of probability metrics, the authors study stability problems by providing a characterization of the ideal metrics for a given problem and investigating the main relationships between different types of probability metrics. The presentation is provided in a general form, although specific cases are considered as they arise in the process of finding supplementary bounds or in applications to important special cases. Svetlozar T. Rachev is the Frey Family Foundation Chair of Quantitative Finance, Department of Applied Mathematics and Statistics, SUNY-Stony Brook and Chief Scientist of Finanalytica, USA. Lev B. Klebanov is a Professor in the Department of Probability and Mathematical Statistics, Charles University, Prague, Czech Republic. Stoyan V. Stoyanov is a Professor at EDHEC Business School and Head of Research, EDHEC-Risk Institute—Asia (Singapore). Frank J. Fabozzi is a Professor at EDHEC Business School. (USA)

Keller-Box Method and Its Application Dec 17 2022 Most of the problems arising in science and engineering are nonlinear. They are inherently difficult to solve. Traditional analytical approximations are valid only for weakly nonlinear problems, and often break down for problems with strong nonlinearity. This book presents the current theoretical developments and applications of Keller-Box method to nonlinear problems. The first half of the book addresses basic concepts to understand the theoretical framework for the method. In the second half of the book, the authors give a number of examples of coupled nonlinear problems that have been solved by means of the Keller-Box method. The particular area of focus is on fluid flow problems governed by nonlinear equations.

Methods of Discovery Nov 23 2020 Abbott helps social science students discover what questions to ask. This exciting book is not about habits and the mechanics of doing social science research, but about habits of thinking that enable students to use those mechanics in new ways, by coming up with new ideas and combining them more effectively with old ones. Abbott organizes his book around general methodological moves, and uses examples from throughout the social sciences to show how these moves can open new lines of thinking. In each chapter, he covers several moves and their reverses (if these exist), discussing particular examples of the move as well as its logical and theoretical structure. Often he goes on to propose applications of the move in a wide variety of empirical settings. The basic aim of Methods of Discovery is to offer readers a new way of thinking about directions for their research and new ways to imagine information relevant to their research problems. Methods of Discovery is part of the Contemporary Societies series.

Art History Apr 09 2022 This book provides a lively and stimulating introduction to methodological debates within art history. Offering a lucid account of approaches from Hegel to post-colonialism, the book provides a sense of art history's own history as a discipline from its emergence in the late-eighteenth century to contemporary debates.

Optimization Theory and Methods Oct 11 2019 Optimization Theory and Methods can be used as a textbook for an optimization course for graduates and senior undergraduates. It is the result of the author's teaching and research over the past decade. It describes optimization theory and several powerful methods. For most methods, the book discusses an idea's motivation, studies the derivation, establishes the global and local convergence, describes algorithmic steps, and discusses the numerical performance.

Hitchcock and the Methods of Suspense Sep 21 2020 Alfred Hitchcock had a gift for turning the familiar into the unfamiliar, the mundane into the unexpected. A director known for planning the entire movie before the first day of filming began by using the storyboard approach, Hitchcock was renowned for his relaxed directing style, resulting in an excellent rapport with his actors. Decades later, Hitchcock's films stand as sterling examples of innovative technique, infused with meaning that only repeated viewing can reveal. This work examines themes, techniques, and the filmmaking process in 15 of Hitchcock's best known films: The 39 Steps, Rebecca, Shadow of a Doubt, Spellbound, Notorious, Rope, Strangers on a Train, Rear Window, The Man Who Knew Too Much, Vertigo, North by Northwest, Psycho, The Birds, Frenzy and Family Plot. It explores the auteur's treatments of psychoanalysis, voyeurism, and collective fears during the Cold War. Also presented are key stories behind several Hitchcock classics, such as the director's stormy relationships with Raymond Chandler and David O. Selznick that resulted in synergetic success for some of his most successful films. The book includes numerous photographs and an extensive bibliography.

Selectivity in State Aid Law and the Methods for the Allocation of the Corporate Tax Base Jan 06 2022 High profile cases before the European Commission and the EU courts have intensified scrutiny of the link between State aid law and the taxation of multinational enterprises. Certain decisions have raised questions about fiscal sovereignty and the interpretation of the rules on State aid -- in particular the notion of selectivity, which have not been addressed in detail by existing research. The combination of the evolution of the notion of selectivity in State aid law, on the one hand, and the need to adapt the rules for the taxation of the profits of multinational enterprises to the modern economy, on the other hand, makes it necessary to assess whether existing as well as alternative rules for the allocation of the corporate tax base might entail a selective treatment. This book responds to the need of research in the area of State aid law applied to the taxation of the income of multinational enterprises, focusing on the crucial concept of selectivity. The analysis proceeds with a detailed investigation of the theoretical issues that arise when applying the selectivity test in State aid law to three methods for the allocation of the corporate tax base between the members of multinational enterprises: -- the arm's length principle; -- transfer pricing safe harbours; and -- systems of formula apportionment. This research project is conducted at a theoretical level, without considering national provisions or particular tax treaties. The author suggests an analytical framework on the application of the selectivity test to the three allocation methods. It is concluded that these methods are likely to have certain selective features, with varying possibilities to be justified by the inner logic of a corporate income tax system. It is also demonstrated that selectivity occurs for different reasons, due to the different rationales of the three allocation methods. This book is intended at contributing to the academic literature on the impact of State aid law on the principles for the taxation of the income of multinational enterprises. The outcome of this research project is also relevant for lawmakers who need to reconcile the imperatives of State aid law with the design of rules that match their tax policies, as well as for judges or lawyers who apply the rules on State aid to tax provisions.

The Methods of Science and Religion Nov 11 2019 The Methods of Science and Religion is a philosophical analysis of the conflict between science and religion, which challenges the popular, contemporary view that science and religion are complementary worldviews. It exposes their methodological incompatibility and concludes that religious modes of investigation are unreliable.

The Great Acting Teachers and Their Methods Jun 11 2022 The Great Acting Teachers and Their Methods, Volume 2 features the innovative ideas and theories of: *à* André Antoine *à* Jacques Copeau *à* Michel Saint-Denis *à* Elia Kazan *à* Uta Hagen *à* David Mamet *à* Anne Bogart *à* Keith Johnstone BOOK SYNOPSIS In this follow-up to his first volume that has become an essential classroom text, Brestoff examines all new teachers and exposes the origin of today's ideas and exercises that acting students are practicing. What is the rationale behind the lesson? Why is it useful? Whether they can be called revolutionary or evolutionary, the conflicting theories of these teachers result from outrage and disgust. Andre Antoine, Jacques Copeau and Michel Saint-Denis represent a virtually unacknowledged yet powerful French influence on acting and actor training in the United States and abroad. American Realist teachers known as the passionate questioners, such as Elia Kazan, who is disgusted with Broadway's commercialism, Uta Hagen and David Mamet, and two influential *à*outside-the-box*à* teachers, Anne Bogart with her Viewpoints work and Keith Johnstone, creator of Theatre Sports, are also featured. While differences among the various acting theories and practices are noted and analyzed, so too are exciting and unexpected connections among them revealed. RICHARD BRESTOFF is Associate Professor of Drama and Associate Head of Acting University of California, Irvine. He is the author of four best-selling books for Smith and Kraus, including *The Great Acting Teachers and Their Methods*, *The Camera Smart Actor*, *The Actor's Wheel of Connection* and *Acting Under the Circumstances*. He has acted on Broadway and off, in Regional Theater and on camera, appearing on the 1991 Emmy Ballot for his Guest-Star performance on the CBS television series, *thirtysomething*. Richard holds an MFA in Acting from NYU where his teachers included Olympia Dukakis, Peter Kass, Joe Chaikin and Kristin Linklater.

Social Science Research Mar 16 2020 This book is designed to introduce doctoral and graduate students to the process of conducting scientific research in the social sciences, business, education, public health, and related disciplines. It is a one-stop, comprehensive, and compact source for foundational concepts in behavioral research, and can serve as a stand-alone text or as a supplement to research readings in any doctoral seminar or research methods class. This book is currently used as a research text at universities on six continents and will shortly be available in nine different languages.

Medieval Illuminators and Their Methods of Work Oct 03 2021 Who were the medieval illuminators? How were their hand-produced books illustrated and decorated? In this beautiful book Jonathan Alexander presents a survey of manuscript illumination throughout Europe from the fourth to the sixteenth century. He discusses the social and historical context of the illuminators' lives, considers their methods of work, and presents a series of case studies to show the range and nature of the visual sources and the ways in which they were adapted, copied, or created anew. Alexander explains that in the early period, Christian monasteries and churches were the main centers for the copying of manuscripts, and so the majority of illuminators were monks working in and for their own monasteries. From the eleventh century, lay scribes and illuminators became increasingly numerous, and by the thirteenth century, professional illuminators dominated the field. During this later period, illuminators were able to travel in search of work and to acquire new ideas, they joined guilds with scribes or with artists in the cities, and their ranks included nuns and secular women. Work was regularly collaborative, and the craft was learned through an apprenticeship system. Alexander carefully analyzes surviving manuscripts and medieval treatises in order to explain the complex and time-consuming technical processes of illumination - its materials, methods, tools, choice of illustration, and execution. From rare surviving contracts, he deduces the preoccupation of patrons with materials and schedules. Illustrating his discussion with examples chosen from religious and secular manuscripts made all over Europe, Alexander recreates the astonishing variety and creativity of medieval illumination. His book will be a standard reference for years to come.

Method Acting and Its Discontents Nov 16 2022 Winner of the 2016 George Jean Nathan Award Method Acting and Its Discontents: On American Psycho-Drama provides a new understanding of a crucial chapter in American theater history. Enelow's consideration of the broader cultural climate of the late 1950s and early 1960s, specifically the debates within psychology and psychoanalysis, the period's racial and sexual politics, and the rise of mass media, gives us a nuanced, complex picture of Lee Strasberg and the Actors Studio and contemporaneous works of drama. Combining cultural analysis, dramaturgical criticism, and performance theory, Enelow shows how Method acting's contradictions reveal powerful tensions inside mid-century notions of individual and collective identity.

Viruses and Their Methods of Identification Dec 05 2021 God is light and within it, there is no darkness This book was made with much love and thought. The ideas stated have been thought about and collected over the period of a year. When I started out my only motive was to make a book that would help in personal and global positive change. Within good time the book became so much more it became a guideline to living in a new state and a new positive/productive way. Many people will find that most of the ideas in this book ring a truth. My only wish is that people will pick up on this ringing vibration of truth and apply it to their lives. Should you have any questions about The Power Within Positivity, please send me an e-mail at act_appalled@hotmail.com.

Causation in Science and the Methods of Scientific Discovery Jul 12 2022 Causation is the main foundation upon which the possibility of science rests. Without causation, there would be no scientific understanding, explanation, prediction, nor application in new technologies. How we discover causal connections is no easy matter, however. Causation often lies hidden from view and it is vital that we adopt the right methods for uncovering it. The choice of methods will inevitably reflect what one takes causation to be, making an accurate account of causation an even more pressing matter. This enquiry informs the correct norms for an empirical study of the world. In *Causation in Science and the Methods of Scientific Discovery*, Rani Lill Anjum and Stephen Mumford propose nine new norms of scientific discovery. A number of existing methodological and philosophical orthodoxies are challenged as they argue that progress in science is being held back by an overly simplistic philosophy of causation.

Normal Approximation by Stein's Method Mar 08 2022 Since its introduction in 1972, Stein's method has offered a completely novel way of evaluating the quality of normal approximations. Through its characterizing equation approach, it is able to provide approximation error bounds in a wide variety of situations, even in the presence of complicated dependence. Use of the method thus opens the door to the analysis of random phenomena arising in areas including statistics, physics, and molecular biology. Though Stein's method for normal approximation is now mature, the literature has so far lacked a complete self contained treatment. This volume contains thorough coverage of the method's fundamentals, includes a large number of recent developments in both theory and applications, and will help accelerate the appreciation, understanding, and use of Stein's method by providing the reader with the tools needed to apply it in new situations. It addresses researchers as well as graduate students in Probability, Statistics and Combinatorics.
