Below are two of the largest issues that can quickly wreck

your Excel experience. The takeaway is that if you are doing high function math with Excel, only use the 2010 version. 1. Vanishing Macro Coding From our earlier discussion of macros, we learned that it is possible to write out sets of instructions that are repeated often so you only have to push one button. Excel has had issues with making this time-saving tool work, especially in the 2007 version. According to NotebookReview.com, "The macro recording errors that plagued Excel 2007 have been repaired...(In the old version, including shapes or charts in your macro recording would leave the final file with huge function gaps or worse, leave a blank recording altogether.)" Definitely use Excel 2010 for a macro-heavy Excel use. Buy a copy to keep reading! If you could work smarter, faster, in Access... would you? This book is a MUST-HAVE for Beginner to Intermediate Excel users who want to learn Excel Macros FAST & Stand Out From The Crowd! The question on everyone's mind will be, what is the future of Excel and VBA macros in this fast-changing world of technology? Well, rest assured that Excel VBA macros will be here until you are retired. Microsoft is aware that there are millions of organizations out there that depend on millions of macros made via Excel. They might have changed to other languages but those VBA

macros will work for them no matter, for many decades to come on the PC and the Mac. The reason for this confidence is that Microsoft still supports Excel 4 macros after 20 years since they became functionally outdated. Excel 4 comes with a primitive macro language which was introduced in August 1992 but was taken out of action by VBA in the next version Excel 5 in June 1994. Excel 4 was not used by many people for programming because it was not very user-friendly. But those programs still ran in Excel 2016 as Microsoft knew that many companies still depended on them. Microsoft has now decided that VBA is not to be extended to a platform that already does not have it. Therefore there will not be any macros for the iPhone, iPad or Android devices. Rather they are developing a macro language which is based on JavaScript and it is to be extended to Windows, Mac, Android, iOS and Excel Online. You may start building macros by using

JavaScript even now but it will not be fun as they still do not have a macro recorder, objects, methods, and properties. It is still incomplete and evolving with a syntax that is not user-friendly and less readable than VBA. Another problem is that JavaScript does not support 2D arrays. You need to use arrays of arrays instead. This language runs asynchronously, therefore, you will have to design the code yourself. And it is slow but, if you are looking for a macro to run on the iPad, this is the path to take going forward. Grab this book today and enrich your Excel Macros expertise! Written for the intermediate or advanced user who wants to go beyond "Mastering" and "Using" to build applications, but isn't ready for the "Developer's Handbook", this book provides a step-by-step introduction to macro programming and application development. The ultimate book of time-saving techniques for people developing Access applications who are not trained database developers. Includes a sample

interactive database, both in the book and on the disk.
