Hilbert demonstrates the historical connection between the nineteenth-century theory of

Emile Durkheim and Max Weber, in which sociology had its origins, and the ethnomethodological approach articulated in the 1960s by Harold Garfinkel. The author rejects the conventional view that draws radical distinctions between the two systems and at the same time provides an intellectual genealogy of ethnomethodology. *A People's History of Classics* explores the influence of the classical past on the lives of working-class people, whose voices have been almost completely excluded from previous histories of classical scholarship and pedagogy, in Britain and Ireland from the late 17th

to the early 20th century. This volume challenges the prevailing scholarly and public assumption that the intimate link between the exclusive intellectual culture of British elites and the study of the ancient Greeks and Romans and their languages meant that working-class culture was a 'Classics-Free Zone'. Making use of diverse sources of information, both published and unpublished, in archives, museums and libraries across the United Kingdom and Ireland, Hall and Stead examine the working-class experience of classical culture from the Bill of Rights in 1689 to the outbreak of

World War II. They analyse a huge volume of data, from individuals, groups, regions and activities, in a huge range of sources including memoirs, autobiographies, Trade Union collections, poetry, factory archives, artefacts and documents in regional museums. This allows a deeper understanding not only of the many examples of interaction with the Classics, but also what these cultural interactions signified to the working poor: from the promise of social advancement, to propaganda exploited by the elites, to covert and overt class war. *A People's History of*

Classics offers a fascinating and insightful exploration of the many and varied engagements with Greece and Rome among the working classes in Britain and Ireland, and is a must-read not only for classicists, but also for students of British and Irish social, intellectual and political history in this period. Further, it brings new historical depth and perspectives to public debates around the future of classical education, and should be read by anyone with an interest in educational policy in Britain today. Presents an overview of the development of the English language

and examines the formation of words especially from Greek and Latin roots. Also discusses definitions and usage. The authors are proud sponsors of the 2020 SAGE Keith Roberts Teaching Innovations Award—enabling graduate students and early career faculty to attend the annual ASA pre-conference teaching and learning workshop. Now with SAGE Publishing, *Contemporary Sociological Theory and Its Classical Roots: The Basics*, is a brief survey of sociology's major theorists and theoretical approaches, from the Classical founders to the

present. With updated scholarship in the new Fifth Edition, authors George Ritzer and Jeffrey Stepnisky connect many theorists and schools of thought together under broad headings that offer students a synthesized view of sociological theory. This text is perfect for those who want an accessible overview of the entire tradition of sociological thinking, with an emphasis on the contemporary relevance of theory. As media environments and communication practices evolve over time, so do theoretical concepts. This book analyzes some of the most well-known and fiercely

discussed concepts of the digital age from a historical perspective, showing how many of them have pre-digital roots and how they have changed and still are constantly changing in the digital era. Written by leading authors in media and communication studies, the chapters historicize 16 concepts that have become central in the digital media literature, focusing on three main areas. The first part, Technologies and Connections, historicises concepts like network, media convergence, multimedia, interactivity and artificial intelligence. The

second one is related to Agency and Politics and explores global governance, datafication, fake news, echo chambers, digital media activism. The last one, Users and Practices, is finally devoted to telepresence, digital loneliness, amateurism, user generated content, fandom and authenticity. The book aims to shed light on how concepts emerge and are co-shaped, circulated, used and reappropriated in different contexts. It argues for the need for a conceptual media and communication history that will reveal new developments without concealing continuities and it

demonstrates how the analogue/digital dichotomy is often a misleading one. Various tricks and techniques are taught by means of exercises. Hints are given in a separate section and a third section contains all solutions in detail. A dictionary section gives definitions of the combinatorial notions occurring in the book. Combinatorial Problems and Exercises was first published in 1979.

This revised edition has the same basic structure but has been brought up to date with a series of exercises on random walks on graphs and their relations to eigenvalues, expansion properties and electrical resistance. In various chapters the author found lines of thought that have been extended in a natural and significant way in recent years. About 60 new exercises (more counting sub-problems) have been added and several solutions have been simplified. This book investigates the nature and properties of roots, the core elements of word meaning. In

particular, chapters examine the interaction of roots with syntactic structure, and the role of their semantic and morpho-phonological properties in that interaction. Issues addressed in the book include the semantics and phonology of roots in isolation and in context; the categorial specification of roots; and the role of phases in word formation. Internationally recognized scholars approach these topics from a variety of theoretical backgrounds, drawing on data from languages including German, Hebrew, and Modern Greek. The

book will be of interest to linguistics students and researchers of all theoretical persuasions from graduate level upwards.
